#### **Bachelor of Technology**

#### **Computer Science And Engineering (Data Science)**

#### **AICTE Guidelines in Model Curriculum:**

A student will be eligible to get Under Graduate degree with Honours only, if he/she completes the additional MOOCs courses such as Coursera certifications, or any other online courses recommended by the Institute (Equivalent to 20 credits). During Complete B.Tech. Program Guidelines for credit calculations are as follows.

- 1. For 6 to 12 Hours =0.5 Credit
- 2. For 13 to18 =1 Credit
- 3. For 19 to 24 =1.5 Credit
- 4. For 25 to 30 =2 Credit
- 5. For 31 to 35 =2.5 Credit
- 6. For 36 to 41 =3 Credit
- 7. For 42 to 47 =3.5 Credit
- 8. For 48 and above =4 Credit

For registration to MOOCs Courses, the students shall follow Coursera registration details as per the assigned login and password by the Institute these courses may be cleared during the B. Tech degree program (as per the list provided). After successful completion of these MOOCs courses, the students shall provide their successful completion status/certificates to the Controller of Examination (COE) of the Institute through their coordinators/Mentors only.

The students shall be awarded Honours Degree as per following criterion.

- i. If he / she secures 7.50 as above CGPA.
- ii. Passed each subject of that degree program in the single attempt without any grace.
- iii. Successful completion of MOOCs based 20 credits.

	<b>B. TECH. THIRD YEAR</b>		
Course code	ACSML0501	LTP	<b>P</b> Credits
Course title	MACHINE LEARNING	3 0 0	0 3
	<b>tive:</b> To introduction to the fundamental concepts in machine leases. To understand the standard and most popular supervised leases.		
Pre-requisite	S: Basic Knowledge of Machine learning.		
	<b>Course Contents / Syllabus</b>		
UNIT-I	INTRODUCTION TO MACHINE LEARNING		8 Hours
Sensitivity Anal Algorithms, Ver	of ML, Introduction of Machine Learning Approaches, Intro ysis, Underfitting and Overfitting, Bias and Variance, Concep sion Space and Candidate Elimination Algorithm, Inductive Bias e Vs Machine Learning.	pt Learning	g Task, Find – S
UNIT-II	MINING ASSOCIATION AND SUPERVISED LEARNING	r J	8 Hours
Neural Networl	<ul> <li>hm: Market basket analysis, Association Rules.</li> <li>ks: Introduction, Perceptron, Multilayer Perceptron, Support vect</li> <li>UNSUPERVISED LEARNING</li> </ul>	or machine	1
UNIT-III	UNSUPERVISED LEARNING		8 Hours
Dealing with con	clustering, K-means clustering, K-Nearest Neighbor, Iterative atinuous, categorical values in K-Means, Hierarchical: AGNES, E ode Clustering, density-based clustering, Expectation Maxir	DIANA, Par	rtitional: K-means
UNIT-IV	PROBABILISTIC LEARNING & ENSEMBLE		8 Hours
	ng, Bayes Optimal Classifier, Naıve Bayes Classifier, Bayesian H hods: Bagging & boosting, C5.0 boosting, Random Forest, Grac		
UNIT-V	<b>REINFORCEMENT LEARNING &amp; CASE STUDIES</b>		8 Hours
Reinforcement I	<b>Learning:</b> Introduction to Reinforcement Learning, Learning in Practice, Learning Models for Reinforcement – (Narning function, QLearning Algorithm), Application of Reinforcement	Aarkov De	cision process, Q
Case Study: He	alth Care, E Commerce, Smart Cities.		
Course outco	me: After completion of this course students will be ab	le to:	

algorithm.       Image: Total algorithm in the provided set of the	K2 K2 K2 K3 / Press,
CO3       Understand the difference between supervise and unsupervised learning.         CO4       Understand algorithmic topics of machine learning and mathematically deep enough to introduce the required theory.         CO5       Apply an appreciation for what is involved in learning from data.         Text books:         1)       Marco Gori , Machine Learning: A Constraint-Based Approach, Morgan Kaufmann. 2017         2)       Ethem Alpaydin, Machine Learning: The New AI, MIT Press-2016         3)       Bishop, Christopher. Neural Networks for Pattern Recognition. New York, NY: Oxford University 1995         4)       Tom M. CO 4	Apply important algorithmic design paradigms and methods of analysis such as	K5
	dynamic programming, backtracking, branch and bound.	
CO 5	Demonstrate tractable and intractable problems and the classes P, NP and NP- complete problems. And also use Algorithms for solving string matching problem.	K3

# **B. TECH THIRD YEAR**

Course code ACSE0503

Course title DESIGN THINKING II

**Course Objectives:** The objective of this course is to upgrade Design Thinking skills by learning & applying advanced and contextual Design Thinking Tools. It aims to solve a Real-Life Problem by applying Design Thinking to create an impact for all the stakeholders

**Pre-requisites:** Student must complete Design Thinking-I course.

# **Course Contents / Syllabus**

UNIT-I

INTRODUCTION

**10 HOURS** 

Credits

3

LT P

2 1 0

Design thinking & Innovation, Design Thinking Mindset and Principles, recap of 5-Step Process of Design Thinking, Design Approaches, additional in-depth examples of each design approaches. Simon Sinek's – Start with Why, The Golden Circle, Asking the "Why" behind each example (an in-class activity of asking 5-WHYS), The Higher Purpose, in-class activity for LDO & sharing insights

Visualization and it's importance in design thinking, reflections on wheel of life (in-class activity for visualization & Wheel of Life), Linking it with Balancing Priorities (in class activity), DBS Singapore and Bank of Americas' Keep the Change Campaign. Litter of Light & Arvind Eye Care Examples, understanding practical application of design thinking tools and concepts, case study on McDonald's Milkshake / Amazon India's Rural Ecommerce & Gillette

Working on 1-hour Design problem, Applying RCA and Brainstorm on innovative solutions.

Main project allocation and expectations from the project.

UNIT-II	<b>REFINEMENT AND PROTOTYPING</b>	8 HOURS	

Refine and narrow down to the best idea, 10-100-1000gm, QBL, Design Tools for Convergence – SWOT Analysis for 1000gm discussion. In-class activity for 10-100-1000gm & QBL

Prototyping (Convergence): Prototyping mindset, tools for prototyping – Sketching, paper models, pseudo-codes, physical mockups, Interaction flows, storyboards, acting/role-playing etc, importance of garnering user feedback for revisiting Brainstormed ideas.

Napkin Pitch, Usability, Minimum Viable Prototype, Connecting Prototype with 3 Laws, A/B Testing, Learning Launch. Decision Making Tools and Approaches – Vroom Yetton Matrix, Shift-Left, Up, Right, Value Proposition, Case study: Careerbuddy, You-Me-Health Story & IBM Learning Launch.

In-class activities on prototyping- paper-pen / physical prototype/ digital prototype of project's 1000gm idea.

# UNIT-III STORYTELLING, TESTING AND ASSESSMENT

8 HOURS

Storytelling: Elements of storytelling, Mapping personas with storytelling, Art of influencing, Elevator Pitch, Successful Campaigns of well-known examples, in-class activity on storytelling. Testing of design with people, conducting usability test, testing as hypothesis, testing as empathy, observation and shadowing methods, Guerrilla

Interviews, validation workshops, user feedback, record results, enhance, retest, and refine design, Software validation tools, design parameters, alpha &beta testing, Taguchi, defect classification, random sampling. Final Project Presentation and assessing the impact of using design thinking

UNIT-IV

INNOVATION, QUALITY AND LEADERSHIP

6 HOURS

Innovation: Need & Importance, Principles of innovations, Asking the Right Questions for innovation, Rationale for innovation, Quality: Principles & Philosophies, Customer perception on quality, Kaizen, 6 Sigma. FinTech case study of Design Thinking application – CANVAS

Leadership, types, qualities and traits of leaders and leadership styles, Leaders vs Manager, Personas of Leaders & Managers, Connecting Leaders-Managers with 13 Musical Notes, Trait theory, LSM (Leadership Situational Model), Team Building Models: Tuckman's and Belbin's. Importance of Spatial elements for innovation.

UNIT-V

# UNDERSTANDING HUMAN DESIRABILITY

8 HOURS

Comprehensive human goal: the five dimensions of human endeavour (Manaviya - Vyavstha) are: Education- Right living (Sikhsa- Sanskar), Health – Self-regulation (Swasthya - Sanyam), Justice – Preservation (Nyaya- Suraksha), Production – Work (Utpadan – Karya), Exchange – Storage (Vinimya – Kosh), Darshan-Gyan-Charitra (Shifting the Thinking)

Interconnectedness and mutual fulfilment among the four orders of nature recyclability and self-regulation in nature, Thinking expansion for harmony: Self-exploration (Johari's window), group behaviour, interpersonal behaviour and skills, Myers-Briggs personality types (MBTI), FIRO-B test to repair relationships.

**Course outcome:** After completion of this course, students will be able to CO 1 Learn sophisticated design tools to sharpen their problem-solving skills K2 CO 2 Construct innovate ideas using design thinking tools and converge to feasible K6 idea for breakthrough solution Implement storytelling for persuasive articulation K3 CO 3 CO 4 Understanding the nature of leadership empowerment K2 CO 5 Understand the role of a human being in ensuring harmony in society and nature. K2 **Textbooks:** Arun Jain, UnMukt : Science & Art of Design Thinking, 2020, Polaris 1.

	<b>B. TECH THIRD YEAR</b>	
Course code	ACSML0551 LT P	Credit
Course title	MACHINE LEARNING LAB 0 0 2	1
List of Exper	iments:	
Sr. No.	Name of Experiment	
1	Write a program to perform various types of regression (Linear & Logistic).	CO2
2	Implement Apriori algorithm using sample data in Python.	CO1
3	Write a program to demonstrate the working of the decision tree based ID3algorithm. Use an appropriate data set for building the decision tree and apply this knowledge to classify a new sample.	
4	Write a program to implement k-Nearest Neighbour algorithm to classify the iris         dataset. Print both correct and wrong predictions. Java/Python ML library classes         can be used for this problem.	
5	Apply EM algorithm to cluster a set of data. Use the same data set for clustering using k-Means algorithm. Compare the results of these two algorithms and comment on the quality of clustering.	
6	Implement Support Vector Machine using Scikit-learn.	
7	Implement the non-parametric Locally Weighted Regression algorithm to fit data points. Select appropriate data set for your experiment and draw graphs.	
8	Implement Gradient Boosting Machine Ensemble in Python.	
9	Implement of ANN algorithm using a sample dataset.	
10	Implement naïve Bayesian Classifier model. Write the program to calculate the accuracy, precision, and recall for your data set.	
Lab Course		
CO1	Understand the implementation procedures for the machine learning algorithms.	K2
CO2	Identify and apply Machine Learning algorithms to solve real-world problems.	K1
CO 3	Examine the requirements on special databases.	K4

B. TECH THIRD YEAR

Course Title	DESIGN AND ANALYSIS OF ALGORITHMS LAB	0 0 2	1
List of Experim	nents		
Sr. No.	Name of Experiment		CO
1	Program for Recursive Binary & Linear Search. CO1, CO2		CO1, CO2
2	Program for Heap Sort. CO1		CO1
3	Program for Merge Sort. CO2		CO2
4	Program for Insertion Sort. CO1		CO1
5	Program for Quick Sort. CO2		CO2
6	Program to implement Knapsack Problem using Greedy Solution. CO	)3	CO3
7	Program for 0/1 knapsack. CO4		CO4
8	Program for LCS. CO4		CO4
9	Program for BFS and DFS. CO1		CO1
10	10Program to implement Dijkstra's Algorithm. CO4		CO4
11	11Program to find Minimum Spanning Tree using Kruskal's Algorithm. CO3		CO3
12	12 Program to implement N Queen Problem using Backtracking. CO4		CO4
Lab Course Ou	tcome: After the completions of this course students will be able to		
CO 1	Implement algorithm to solve problems by iterative approach.		К3
CO 2	Implement algorithm to solve problems by divide and conquer approach.		К3
CO 3	CO 3 Implement algorithm to solve problems by Greedy algorithm approach.		К3
CO 4	Implement algorithm to solve problems by Dynamic programming, backtracking, branch and bound approach.		K3

	<b>B. TECH THIRD YEAR</b>		
Course Code	ACSE0552	LTP	Credit
Course Title	COMPUTER NETWORKS LAB	0 0 2	1
List of Experim	nents		
Sr. No.	Name of Experiment		СО
1	To make an UTP cable with RJ-45 connector, and build and test simple network using UTP cable (crossover) and a hub based network.		CO1
2	Implementation of data link layer framing method such as bit stuffing in any language like C++, Java or Python.		CO2
3	3 Test the Network connection using ping command and use of ipconfig, netstat and trcert command provided by TCP/IP.		CO3
4	Implementation of CRC algorithm in any language like C++ , Java or	Python.	CO3
5	Implementation of stop and wait protocol in any language like C++ , Java or Python.		CO3
б	Implementation of hamming code (7, 4) code to limit the noise. We have to code the bit data in to 7bit data by adding 3 parity bits. Implement in any language like C++, Java or Python.		CO3
7	Implementation of Caesar cipher technique & RSA algorithm in any language like C++, Java or Python.		CO4
8	Write a program in java to find the IP address of the system.		CO4
9	Write a program in java to find the IP address of the any site if name is given.		CO4
10	Introduction to Network Devices (Repeater, Hub, Bridge, Switch, Router, Gateways, NIC etc.).		CO5
11	Introduction to CISCO Peaket Tropper Design Pus, Star, Mash, Ding Topology and		CO5
12			CO5
Lab Course Ou	tcome: After the completions of this course students will be able to		
CO 1	Build an understanding of UTP cable with RJ-45 connector, and b simple network using UTP cable.	uild and test	K2, K4, K6
CO 2	CO 2 Understand and implementation of the bit stuffing protocol.		K2, K3
CO 3	Understand and test the various network connection commands of error control, flow control.	TCP/IP and	K2, K4
CO 4	,		K2, K3
CO 5	Design and understanding the various topology and configuration or router using cisco packet tracer	f switch and	K2, K6

# **B. TECH THIRD YEAR (ELECTIVE I)**

**Course Code ACSE0511** 

**Course Title CRM FUNDAMENTALS** 

**Course objective:** This course is designed to help in understanding the fundamentals of CRM. It will help in providing better services for Sales, Marketing and Customer Relations in an Enterprise. To make the students understand the organizational need, benefits and process of creating long-term value for individual customers. To disseminate knowledge regarding the concept of e-CRM and e-CRM technologies. To enable the students understand the technological and human issues relating to implementation of Customer Relationship Management in the organizations.

## Pre-requisites: None

UNIT-I

## **Course Contents / Syllabus**

CRM- definition, history, goals. Sources of CRM value. Components of CRM: people, process, technology, Evolution of CRM: marketing and its principles, customer relations to CRM. Dynamics of Customer Supplier Relationships, Nature and context of CRM, Strategy and Organization of CRM: strategy, The relationship-oriented organization: Mission, Culture, Structure, People, Communication & Information Systems.

#### **CRM Strategy and Framework** UNIT-II

Introduction

Developing a CRM strategy. Customer oriented (C in CRM), Relationship driven, 360 degree view of customer. CRM system features- functions, application, benefits and solutions. Importance of loyalty- active, passive, split, shifting and switchers, customer profiling, customer segmentation model, Customer Experience, relationship marketing and journey, Case study.

#### **Solution Design and Architecture** UNIT-III

CRM system solution- specifications. Data Analysis, Solution Requirements. Types of CRM- On-Premise, cloud based. Pros and Cons of each. Integration CRM with other enterprise applications.

The Technology of CRM: Data warehouses and customer relationships, creating data mart model, components of operational data warehouse.

#### UNIT-IV **CRM for Business**

CRM in Sales, Service, Marketing, E-commerce. Social Customer Relationship Management. Analytical CRM: Predictive Analytics Vs Operational Analytics. Channel Partner Relationship management, Collaborative CRM (using data pooling), Business Benefits of Cloud Based System, SLAs, Practical Challenges.

#### **CRM** implementation UNIT-V

Building CRM roadmaps: current processes, customers, strategic goals, technology issues, pilot and proof of concept projects. Preliminary Roadmap and its template, developing roadmap midstream. Design stage, custom development, integration, reporting, data migration, and implementation, testing, launching and application management. Introduction to following CRM tools: ZOHO, Pega, Microsoft Dynamics 365, Sales force.

<b>Course Outcome:</b> At the end of course, the student will be able		
CO 1	Understand the basic concepts of Customer relationship management.	K1, K2
CO 2	To understand strategy and framework of Customer relationship management.	K2
CO 3	Learn basics of Cloud Based Customer relationship management.	K1

# **B. TECH THIRD YEAR (ELECTIVE II)**

Course Code ACSE0516

<b>Course Title</b>	WEB TECHNOLOGY

**Course objective:** This course covers different aspect of web technology such as HTML, CSS, Java Script and provide fundamental concepts of Internet, Web Technology and Web Programming. Students will be able to build a proper responsive website.

**Pre-requisites:** Basic Knowledge of any programming language like C/C++/Python/Java. Familiarity with basic concepts of Internet.

	Course Contents / Syllabus
UNIT-I	Basics of Web Technology & Testing

History of Web and Internet, connecting to Internet, Introduction to Internet services and tools, Client-Server Computing, Protocols Governing Web, Basic principles involved in developing a web site, Planning process, Types of Websites, Web Standards and W3C recommendations, Web Hosting Basics, Types of Hosting Packages, Introduction to Web testing, Functional Testing,

Usability & Visual Testing, Performance & Load Testing.

# UNIT-II Introduction to HTML & XML

HTML, DOM- Introduction to Document Object Model, Basic structure of an HTML document, Mark up Tags, Heading-Paragraphs, Line Breaks, Understand the structure of HTML tables. Lists, working with Hyperlinks, Image Handling, Understanding Frames and their needs, HTML forms for User inputs. New form Elements- date, number, range, email, search and data list, Understanding audio, video and article tags XML Syntax, Elements, Attributes, Namespaces, Display, HTTP request, Parser, DOM, XPath, XSLT, XQuerry, XLink, Validator, DTD and XML Schema.

# UNIT-III Concepts of CSS3 & Bootstrap

Creating Style Sheet, CSS Properties, CSS Styling (Background, Text Format, Controlling Fonts), Working with block elements and objects, Working with Lists and Tables, CSSId and Class, Box Model(Introduction, JavaScript Border properties, Padding Properties, Margin properties) CSS Advanced(Grouping, Dimension, Display, Positioning,

Floating, Align, Pseudo class, Navigation Bar, Image Sprites, Attribute sector), CSS Color, Creating page Layout and Site. Bootstrap Features & Bootstrap grid system, Bootstrap Components, Bootstrap Plug-Ins.

# UNIT-IV JavaScript and ES6

Introduction to Java Script, Javascript Types, Var, Let and Const Keywords, Operators in JS, Conditional Statements, Java Script Loops, JS Popup Boxes JS Events, JS Arrays, Working with Arrays, JS Objects, JS Functions Validation of Forms, Arrow functions and default arguments, Template Strings, Strings methods, Callback functions, Object destructuring, Spread and Rest Operator, Typescript fundamentals, Typescript OOPs- Classes, Interfaces, Constructor etc. Decorator and Spread Operator, Asynchronous Programming in ES6, Promise Constructor, Promise with Chain, Promise Race.

### UNIT-V Introduction to PHP

Basic Syntax of PHP, Variables & Constants, Data Type, Operator & Expressions, Control flow and Decision making statements, Functions, Strings, Arrays, Understanding file& directory, Opening and closing, a file, Copying, renaming and deleting a file, working with directories, Creating and deleting folder, File Uploading &Downloading. Introduction to Session Control, Session Functionality What is a Cookie, Setting Cookies with PHP. Using Cookies with Sessions, Deleting Cookies, Registering Session variables, Destroying the variables and Session.

# **B. TECH THIRD YEAR (ELECTIVE I)**

Course Code	ACSE0512	LTP	Credits
Course Title	PYTHON WEB DEVELOPMENT WITH DJANGO	3 0 0	3

Course objective: This course focuses on how to design and build static as well as dynamic webpages and interactive web based applications. These courses mainly focus how Python operates within web development using the increasingly popular Django framework.

**Pre-requisites:** Students should have good knowledge of Python Programming and Python coding experience.

### **Course Contents / Syllabus**

**UNIT-I Python libraries for web development** 

Collections-Container datatypes, Tkinter-GUI applications, Requests-HTTP requests, BeautifulSoup4-web scraping, Scrapy, Zappa, Dash, CherryPy, Turbo Gears, Flask, Web2Py, Bottle, Falcon, Cubic Web, Quixote, Pyramid.

#### UNIT-II **Introduction to Django Framework**

Understanding Django environment, Features of Django and Django architecture, MVC and MTV, Urls and Views, Mapping the views to URLs, Django Template, Template inheritance Django Models, Creating model for site, Converting the model into a table, Fields in Models, Integrating Bootstrap into Diango, Creating tables, Creating grids, Creating carousels.

#### UNIT-III Integrating Accounts & Authentication on Django

Introduction to Django Authentication System, Security Problem & Solution with Django Creating Registration Form using Django, Adding Email Field in Forms, Configuring email settings, Sending emails with Django, Adding Grid Layout On Registration Page, Adding Page Restrictions, Login Functionality Test and Logout.

#### **UNIT-IV Connecting SOLite with Django**

Database Migrations, Fetch Data From Database, Displaying Data On Templates, Adding Condition On Data, Sending data from url to view, Sending data from view to template, Saving objects into database, Sorting objects, Filtering objects, Deleting objects, Difference between session and cookie, Creating sessions and cookies in Django.

**UNIT-V** 

### **Deploying Django Web Application on Cloud**

Creating a functional website in Django, Four Important Pillars to Deploy, registering on Heroku and GitHub, Push project from Local System to GitHub, Working with Django Heroku, Working with Static Root, Handling WSGI with gunicorn, Setting up Database & adding users.

**Course Outcome:** After completion of this course students will be able to

CO 1 Apply the knowledge of python programing that are vital in understanding Django application and analyze the concepts, principles and methods in current client-side technology to implement Django application over the web.		K3,K6
CO 2	Demonstrate web application framework i.e. Django to design and implement typical dynamic web pages and interactive web based applications.	K3, K6
CO 3	Implementing and analyzing the concept of Integrating Accounts & Authentication on Django.	K3, K4
CO 4	Understand the impact of web designing by database connectivity with SQLite in the current market place where everyone uses to prefer electronic medium for shoping, commerce, and even social life also.	K2, K3
CO 5	Analyzing and creating a functional website in Django and deploy Django Web Application on Cloud.	K3, K6

#### **B. TECH THIRD YEAR (ELECTIVE -I)** Course Code ACSAI0515 LTP Credits Course Title | MOBILE APPLICATION DEVELOPMENT 300 3 **Course objective:** This course introduces students to programming technologies, design and development related to mobile applications using android/ iOS. Course also aims at mobile application development frameworks; mobile architecture, design and engineering issues, techniques, methodologies for mobile application development. Pre-requisites: Overview of programming language: JAVA and XML. **Course Contents / Syllabus Introduction to Mobile Application and Architecture** UNIT-I **8 Hours** Mobile applications, History of mobile application frameworks, Characteristics and types of mobile applications, Achieving quality constraints. Mobile Architecture- Mobile Hardware Architecture: processors used for Mobile and Handheld devices and SoC architecture; Mobile Software Architecture: Real Time Operating systems and Mobile Real Time Operating Systems, SDK's. **Android Developing Environment** UNIT-II 6 Hours Introduction to Android, Android ecosystem, Android SDK and Installation, Layered Architecture of Android, Android API levels (versions & version names), Android Development Tools, Basic Building blocks -Protocols, Activities, Services, Broadcast Receivers & Content providers. UNIT-III **UI** Components and Multimedia **10 Hours** Fundamental UI design, layout and view types, Interaction with server-side applications – Using Google Maps, GPS and Wi-Fi, Integration with social media applications, Interfacing sensor data with mobile application, Accessing applications hosted in a cloud computing environment. Multimedia Supported audio and video formats, Audio capture, Bluetooth, Animation. **Android Application Deployment** 8 Hours UNIT-IV Persisting data using SQLite database, Testing and debugging Android Application, Packaging and Android Application Deployment on device with Windows, Android Permissions. Testing and publishing of Mobile Applications on different app stores. **UNIT-V** iOS and Swift 8 Hours Introduction to Objective C, iOS features, UI implementation, Touch frameworks, Data persistence using Core Data and SQLite, Location aware applications using Core Location and Map Kit, integrating calendar and address book with social media application, using Wifi - iPhone marketplace. Swift: Introduction to Swift, Features of swift. **Course outcome:** After completion of this course students will be able to CO 1 Recall vision, definition, conceptual framework, architecture of mobile K1 applications. Describe and configure android development environment, tools, and **CO 2** K2 architecture

CO 3	Create and implement UI components and multimedia framework, fragments, audio capture, animation, and other activities.	K6
CO 4	Integrate and interact with server-side applications with testing and deployment of android application.	K3
CO 5	Analyze iOS and swift features, frameworks, map kit, and social media applications.	K4

Course code	ACSDS0602	LTP	Credits
Course title	BUSINESS INTELLIGENCE AND DATA VISUALIZATION	300	3

TITLD D TTLA

**Course objective:** This course covers fundamental concepts of Business Intelligence tools, techniques, components and its future. As well as a bit more formal understanding of data visualization concepts and techniques. The underlying theme in the course is feature of Tableau, its capabilities.

Pre-requisites: Basic Knowledge of Business intelligence.

# Course Contents / Syllabus UNIT-I INTRODUCTION TO BUSINESS INTELLIGENCE

8 HOURS

Business Intelligence (BI), Scope of BI solutions and their fitting into existing infrastructure, BI Components and architecture, BI Components, Future of Business Intelligence, Functional areas of BI tools, End user assumptions, setting up data for BI, Data warehouse, OLAP and advanced analytics, Supporting the requirements of senior executives including performance management, Glossary of terms and their definitions specific to the field of BI and BI systems.

## UNIT-II ELEMENTS OF BUSINESS INTELLIGENCE SOLUTIONS 8 HOURS

Business Query and Reporting, Reporting, Dashboards and Scorecards Development, Development, Scorecards, Metadata models, Automated Tasks and Events, Mobile Business Intelligence, Software development kit (SDK). Stages of Business Intelligence Projects, Project Tasks, Risk Management and Mitigation, Cost justifying BI solutions and measuring success, BI Design and Development, Building Reports, Building a Report, Drill-up, Drill-down Capabilities.

## UNIT-III TABLEAU

**Introductions and overview:** What Tableau can and cannot do well, Debug and troubleshoot installation and configuration of the software.

**Creating Your First visualization:** Getting started with Tableau Software, Using Data file formats, connecting your Data to Tableau, creating basic charts (line, bar charts, Tree maps), Using the Show me panel **Tableau Calculations:** Overview of SUM, AVR, and Aggregate features Creating custom calculations and fields, Applying new data calculations to your visualization.

**Formatting Visualizations:** Formatting Tools and Menus, formatting specific parts of the view, Editing and Formatting Axes.

## UNIT-IV DATA VISUALIZATION

**Manipulating Data in Tableau:** Cleaning-up the data with the Data Interpreter, structuring your data, Sorting, and filtering Tableau data, Pivoting Tableau data.

Advanced Visualization Tools: Using Filters, Using the Detail panel Using the Size panels, customizing filters, Using and Customizing tooltips, Formatting your data with colours.

**Creating Dashboards & Stories:** Using Storytelling, creating your first dashboard and Story, Design for different displays, Adding interactivity to your Dashboard

**Distributing & Publishing Your Visualization:** Tableau file types, Publishing to Tableau Online, sharing your visualization, Printing, and exporting.

Given a case study: Perform Interactive Data Visualization with Tableau

## 8 HOURS

## **8 HOURS**

## UNIT-V INTRODUCTION TO POWER BI

Describe the Power BI ecosystem, Define Power BI and its relationship with Excel, Discuss the Power BI suite of products, Describe how the Power BI products integrate, Explain the typical analytics process flow, Differentiate between the various data sources, Connect Power BI to a data source, Clean and transform data to ensure data quality, Load the data to the Power BI Data Model, Describe the Power BI ecosystem, Define Power BI and its relationship with Excel, Discuss the Power BI suite of products, Describe how the Power BI products integrate, Explain the typical analytics process flow.

**Course outcome:** After completion of this course students will be able to:

CO 1	Apply quantitative modelling and data analysis techniques to the solution of real-world business problems	К3
CO 2	Understand the importance of data visualization and the design and use of many visual components	K2
CO 3	Understand as products integrate defining various analytical process flow.	K2
CO 4	Learn the basics of troubleshooting and creating charts using various formatting tools.	K6
CO 5	Learn basics of structuring data and creating dashboard stories adding interactivity dashboard stories.	K6

## **Textbooks:**

1. Efraim Turban, Ramesh Sharda, Dursun Delen, "Decision Support and Business Intelligence Systems", 9th Edition, Pearson 2013.

2. Learning Tableau 10 - Second Edition: Business Intelligence and data visualization that brings your business into focus" by Joshua N. Milligan

3. Tableau Your Data! - "Daniel G. Murray and the Inter Works BI Team"-Wiley

## **Reference Books:**

## **B. TECH THIRD YEAR**

Course code	ACSE0603	LTP	Credits
Course title	SOFTWARE ENGINEERING	3 0 0	3

## **Course objective:**

"To teach the students all phases of the Software Development Life Cycle(SDLC) and their role in software development through theory as well as practice." Students will be able to apply the scientific knowledge in systematic way to create and build cost effective software solutions.

**Pre-requisites:** Basic knowledge about software and its types. Basic knowledge of OOPs concepts.

## **Course Contents / Syllabus**

#### UNIT-I **INTRODUCTION**

Introduction: Evolving role of software, Software Characteristics, Software crisis, Silver bullet, Software myths, Software Engineering Phases, Team Software Process (TSP), emergence of software engineering, Software process, project and product, Software Process Models: Waterfall Model, Prototype Model, Spiral Model, Iterative Model, Incremental Model, Agile Methodology: Scrum Sprint, Scrum Team, Scrum Master, Product Owner.

#### **UNIT-II** SOFTWARE REQUIREMENT

Software Requirement Specifications (SRS): Requirement Engineering Process: Elicitation, Analysis, Documentation, Review and Management of User Needs, Feasibility Study, Information Modelling, Use Case Diagram, Data Flow Diagrams, Entity Relationship Diagrams, Decision Tables, SRS Document, IEEE Standards for SRS. Software Quality Assurance (SQA): Quality concepts, SQA activities, Formal approaches to SQA; Statistical software quality assurance; CMM, The ISO standard.

#### SOFTWARE DESIGN UNIT-III

Software Design: Design principles, the design process; Design concepts: refinement, modularity: Cohesion, Coupling, Effective modular design: Functional independence, Design Heuristics for effective modularity, Software architecture: Function Oriented Design, Object Oriented Design: OOPs concepts-Abstraction, object, classification, inheritance, encapsulation, UML Diagrams-Class Diagram, Interaction diagram, Activity Diagram, control hierarchy: Top-Down and Bottom-Up Design, structural partitioning, software procedure.

#### UNIT-IV SOFTWARE TESTING

Software Testing: Testing Objectives, 7 Principals of Testing, Levels of Testing: Unit Testing, System Testing, Integration Testing, User Acceptance Testing, Regression Testing, Testing for Functionality and Testing for Performance, Top Down and Bottom-Up Testing Strategies: Test Drivers and Test Stubs, Structural Testing (White Box Testing), Functional Testing (Black Box Testing), Test Data Suit Preparation, Alpha and Beta Testing of Products. Functional Testing(DAO, BO) Static Testing Strategies: Formal Technical Reviews (Peer Reviews), Walk Through, Code Inspection, Compliance with Design and Coding Standards.

#### UNIT-V **PROJECT MAINTENANCE AND MANAGEMENT CONCEPTS** 8 Hours

Project management concepts, Planning the software project, Estimation: Software Measurement and Metrics, Various Size Oriented Measures-LOC based, FP based, Halestead's Software Science, Cyclomatic Complexity Measures: Control Flow Graphs, Use-case based, empirical estimation COCOMO- A Heuristic estimation techniques, staffing level estimation, team structures, risk analysis and management. Configuration Management, Software reengineering: reverse engineering, restructuring: forward engineering, Clean Room software engineering. Case Tools, Software Maintenance: Preventive, Corrective and Perfective Maintenance, Cost of Maintenance, Need of Maintenance.

**Course outcome:** After completion of this course students will be able to

8 Hours

8 Hours

**8** Hours

**8 Hours** 

CO 1	Identify, formulate, analyse, and solve problems, as well as identify the computing requirements appropriate to their solutions. The ability to work in one or more significant application domains	K2, K4, K5
CO 2	Design, implement, and evaluate software-based systems, components, or programs of varying complexity that meet desired needs, satisfy realistic constraints, and demonstrate accepted design and development principles.	K2, K3, K4, K6
CO 3	Apply knowledge of computing, mathematics, science, and engineering appropriate to the discipline, particularly in the modelling and design of software systems and in the analysis of trade-offs inherent in design decisions.	K3, K4
CO 4	Formulate testing strategies for software system, apply various testing techniques such as unit testing, test driven development and functional testing.	K3
CO 5	Understand ability to engage in life-long maintenance and continuing Software development using various software management tools.	K2, K5

#### **B. TECH THIRD YEAR (ELECTIVE III)** Course code ACSE0611 L Т Р Credits Course title CRM DEVELOPMENT 3 0 3 0 Course objective: Meet the tools and technologies that power development on the Salesforce platform. Give your data structure with objects, fields, and relationships. Automate processes for every app, experience, and portal with declarative tools. Use Visual force to build custom user interfaces for mobile and web apps. Write robust code by executing Apex unit tests. **Pre-requisites:** Creative thinking and which is being used by the creative talent in your business areas. **UNIT-I** Salesforce Fundamentals 8 Hours Building blocks of Salesforce, Data model & Security model, Business process automation options, Master Sales Cloud and Service Cloud, Salesforce platform, Salesforce terminology, force platform, Multi-tenancy and cloud, Salesforce metadata and APIs, Salesforce architecture. **8 Hours** UNIT-II **Salesforce Data Modeling** Salesforce Data model, IDIC model QIC model, CRM value chain model ,Payne & Frow's five forces and CRM objects, Relationship types, Formula fields and roll-up summary fields, Importing and exporting data UNIT-III Logic and Process Automation **8 Hours** Formulas and Validations, Formula Operators and Functions, Screen Flow Distribution, Salesforce Flow, Apex Basics , Apex Triggers, Database & .NET Basics, Search Solution Basics, Triggers and Order of Execution, Platform Events Basics, Process Automation Specialist, Apex Specialist, Apex integration Services, Apex Metadata API. **8 Hours** UNIT-IV **User Interface** General development, Apex code development Visualforce development, Sales dashboard, Visualforce performance ,Technique for optimizing performance Lightning Web Components Basics Lightning App Builders Development. **UNIT-V Testing, Debugging, and Deployment 8 Hours** Apex Testing, Apex code Test Method, Custom controller and Controller Extension, Test Data Developer Console Basics, Asynchronous Apex, Debugging Tool and Techniques, Debug logs, Application lifecycle and development model, Change Set Development model. **Course Outcome:** At the end of course, the student will be able to: CO1 Implement the working concept of variables K1, K2 K1, K2 CO<sub>2</sub> Apply the concepts of Data Management Understand the concepts of APEX CO3 K3 CO4 Understand the concepts of APEX Code development K1, K2

CO5 Implement concepts of APEX Integration

	<b>B. TECH THIRD YEAR (ELECTIVE-IV</b>	/)			
Course code	ACSE0613	L	Т	Р	Credits
Course Title	<b>ROBOTICS PROCESS AUTOMATION</b> (RPA)	3	0	0	3

**Course objective:** This course focus on The Robotic Process Automation (RPA) specialization offers comprehensive knowledge and professional-level skills focused on developing and deploying software robots. It starts with the basic concepts of Robotic Process Automation. It builds on these concepts and introduces key RPA Design and Development strategies and methodologies, specifically in the context of UiPath products. A student undergoing the course shall develop the competence to design and develop automation solutions for business processes.

Pre-requisites: Computer Organization and Architecture

## **Course Contents / Syllabus**

## UNIT-I PROGRAMMING BASICS & RECAP

PROGRAMMING BASICS &RECAP: Programming Concepts Basics - Understanding the application - Basic Web Concepts - Protocols - Email Clients -. Data Structures - Data Tables - Algorithms - Software Processes -Software Design - Scripting - .Net Framework - .Net Fundamentals - XML - Control structures and functions -XML - HTML - CSS - Variables & Arguments.

## UNIT-II RPA Concepts

RPA Concepts: RPA Basics - History of Automation - What is RPA - RPA vs Automation - Processes & Flowcharts - Programming Constructs in RPA - What Processes can be Automated - Types of Bots - Workloads which can be automated - RPA Advanced Concepts - Standardization of processes - RPA Development methodologies -Difference from SDLC - Robotic control flow architecture - RPA business case - RPA Team - Process Design Document/Solution Design Document - Industries best suited for RPA - Risks & Challenges with RPA - RPA and emerging ecosystem

## UNIT-III RPA TOOL INTRODUCTION & BASICS

RPA TOOL INTRODUCTION &BASICS: Introduction to RPA Tool - The User Interface - Variables - Managing Variables - Naming Best Practices - The Variables Panel - Generic Value Variables - Text Variables - True or False Variables - Number Variables - Array Variables - Date and Time Variables - Data Table Variables -Managing Arguments - Naming Best Practices - The Arguments Panel - Using Arguments - About Imported Namespaces - Importing New Namespaces Control Flow - Control Flow Introduction - If Else Statements - Loops - Advanced Control Flow - Sequences - Flowcharts - About Control Flow - Control Flow Activities - The Assign Activity - The Delay Activity - The Do While Activity - The If Activity - The Switch Activity - The While Activity - The For Each Activity - The Break Activity - Data Manipulation - Data Manipulation Introduction - Scalar variables, collections and Tables - Text Manipulation - Data Manipulation - Gathering and Assembling Data

UNIT-IV

## ADVANCED AUTOMATION CONCEPTS AND TECHNIQUES

8 Hours

## 8 Hours

**8** Hours

## 8 Hours

ADVANCED AUTOMATION CONCEPTS AND TECHNIQUES : Recording and Advanced UI Interaction-Recording Introduction-Basic and Desktop Recording-Web Recording - Input/output Methods - Screen Scraping-Data Scraping - Scraping advanced techniques - Selectors - Selectors - Defining and Assessing Selectors -Customization - Debugging - Dynamic Selectors - Partial Selectors - RPA Challenge - Image, Text & Advanced Citrix Automation - Introduction to Image & Text Automation - Image based automation - Keyboard based automation - Information Retrieval - Advanced Citrix Automation challenges - Best Practices - Using tab for Images - Starting Apps - Excel Data Tables & PDF - Data Tables in RPA - Excel and Data Table basics - Data Manipulation in excel - Extracting Data from PDF - Extracting a single piece of data - Anchors - Using anchors in PDF

## UNIT-V EMAIL AUTOMATION & EXCEPTIONAL

8 Hours

EMAIL AUTOMATION & EXCEPTIONAL: Email Automation - Email Automation - Incoming Email automation - Sending Email, automation - Debugging and Exception Handling - Debugging Tools - Strategies for solving issues - Catching errors.

**COURSE OUTCOMES:** After completion of this course students will be able to CO 1 Understand RPA principles, its features and applications K3 CO 2 Demonstrate proficiency in handling several types of variables inside a workflow K3 and data manipulation techniques CO 3 Gain insights into Desktop, Web, Citrix, Email Automation and exception handling. K2 Analyze and design a real-world automation project and debug the workflows. CO 4 K2 CO5 K2 Student will be able to understand architecture of computing technology.

Course Code	ACSE0614 L T	P	Credits
Course Title	WEB DEVELOPMENT USING MEAN STACK30	0	3
Course object	ive:		
This course focus	es on how to design and build static as well as dynamic webpages and interactiv	ve we	b applications.
Students examine	e advanced topics like Angular, nodejs, Mongodb and Express framework f	for ir	nteractive web
applications that u	use rich user interfaces.		
<b>Pre-requisites</b>	Basic knowledge of HTML, CSS and ES6 required.		
	Course Contents / Syllabus		
UNIT-I	Introduction to Nodejs		8 Hours
Installing Nodeis.	Node in-built packages (buffer, fs, http, os, path, util, url) Node.js modules, F	File Sv	
	rver and Client, Error handling with appropriate HTTP, Callback function, asynch		
	, POST PUT, DELETE UPDATE), GraphQL, Promises, Promise Chaining, Intro		
engine (EJS).			1
UNIT-II	Express Framework		8 Hours
	ess, Postman configuration, Environment Variables, Routing, Defining pug templ	lates,	
	binding, middleware function, Serving static files, Express sessions, REST full		
-	nent modeling with Mongoose.		,
-	e e		
UNIT-III	Basics of Angular js		8 Hours
	<b>Basics of Angular js</b> and installation. Power of Types, Functions, Function as types Optional and	defai	
Typescript, Setup	and installation, Power of Types, Functions, Function as types Optional and		ult parameters,
Typescript, Setup Arrow functions,	and installation, Power of Types, Functions, Function as types Optional and Function overloading, Access modifiers, Getters and setters, Read-only & stati		ult parameters,
Typescript, Setup Arrow functions,	and installation, Power of Types, Functions, Function as types Optional and Function overloading, Access modifiers, Getters and setters, Read-only & statiling and Implementing Interface, Import and Export modules.		ult parameters, ostract classes,
Typescript, Setup Arrow functions, Interfaces, Extend <b>UNIT-IV</b>	and installation, Power of Types, Functions, Function as types Optional and Function overloading, Access modifiers, Getters and setters, Read-only & stati ling and Implementing Interface, Import and Export modules. Building Single Page App with Angular js	ic, Al	ult parameters, bstract classes, <b>8 Hours</b>
Typescript, Setup Arrow functions, Interfaces, Extend <b>UNIT-IV</b> MVC Architectur	and installation, Power of Types, Functions, Function as types Optional and Function overloading, Access modifiers, Getters and setters, Read-only & stati ling and Implementing Interface, Import and Export modules. Building Single Page App with Angular js e, One-way and Two-way data binding, AngularJS Expressions, AngularJS Cor	ic, Al	ult parameters, bstract classes, <b>8 Hours</b> ers, AngularJS
Typescript, Setup Arrow functions, Interfaces, Extend <b>UNIT-IV</b> MVC Architectur Modules, adding	and installation, Power of Types, Functions, Function as types Optional and Function overloading, Access modifiers, Getters and setters, Read-only & stati ling and Implementing Interface, Import and Export modules. Building Single Page App with Angular js	ic, Al	ult parameters, bstract classes, <b>8 Hours</b> ers, AngularJS
Typescript, Setup Arrow functions, Interfaces, Extend <b>UNIT-IV</b> MVC Architectur Modules, adding	and installation, Power of Types, Functions, Function as types Optional and Function overloading, Access modifiers, Getters and setters, Read-only & stati ling and Implementing Interface, Import and Export modules. <b>Building Single Page App with Angular js</b> e, One-way and Two-way data binding, AngularJS Expressions, AngularJS Cor controller to a module, Component, Dependency Injection, Filters, Tables, An Select using ng-option, AngularJS AJAX.	ic, Al	alt parameters, bstract classes, <b>8 Hours</b> ers, AngularJS cJS Forms and
Typescript, Setup Arrow functions, Interfaces, Extend <b>UNIT-IV</b> MVC Architectur Modules, adding Forms validation, <b>UNIT-V</b>	<ul> <li>and installation, Power of Types, Functions, Function as types Optional and Function overloading, Access modifiers, Getters and setters, Read-only &amp; statiling and Implementing Interface, Import and Export modules.</li> <li>Building Single Page App with Angular js</li> <li>e, One-way and Two-way data binding, AngularJS Expressions, AngularJS Cor controller to a module, Component, Dependency Injection, Filters, Tables, An Select using ng-option, AngularJS AJAX.</li> <li>Connecting Angular js with MongoDB</li> </ul>	ic, Al	alt parameters, bstract classes, <b>8 Hours</b> ers, AngularJS rJS Forms and <b>8 Hours</b>
Typescript, Setup Arrow functions, Interfaces, Extend <b>UNIT-IV</b> MVC Architectur Modules, adding Forms validation, <b>UNIT-V</b> Environment Setu	<ul> <li>and installation, Power of Types, Functions, Function as types Optional and Function overloading, Access modifiers, Getters and setters, Read-only &amp; statiling and Implementing Interface, Import and Export modules.</li> <li>Building Single Page App with Angular js</li> <li>e, One-way and Two-way data binding, AngularJS Expressions, AngularJS Corcontroller to a module, Component, Dependency Injection, Filters, Tables, An Select using ng-option, AngularJS AJAX.</li> <li>Connecting Angular js with MongoDB</li> <li>p of Mongodb, data modeling, The current SQL/NoSQL landscape, Create college</li> </ul>	ic, Al	alt parameters, bstract classes, <b>8 Hours</b> ers, AngularJS cJS Forms and <b>8 Hours</b> n in Mongodb,
Typescript, Setup Arrow functions, Interfaces, Extend <b>UNIT-IV</b> MVC Architectur Modules, adding Forms validation, <b>UNIT-V</b> Environment Setu CRUD Operation	<ul> <li>and installation, Power of Types, Functions, Function as types Optional and Function overloading, Access modifiers, Getters and setters, Read-only &amp; statiling and Implementing Interface, Import and Export modules.</li> <li>Building Single Page App with Angular js</li> <li>e, One-way and Two-way data binding, AngularJS Expressions, AngularJS Cor controller to a module, Component, Dependency Injection, Filters, Tables, An Select using ng-option, AngularJS AJAX.</li> <li>Connecting Angular js with MongoDB</li> </ul>	ic, Al	alt parameters, bstract classes, <b>8 Hours</b> ers, AngularJS cJS Forms and <b>8 Hours</b> n in Mongodb,
Typescript, Setup Arrow functions, Interfaces, Extend <b>UNIT-IV</b> MVC Architectur Modules, adding Forms validation, <b>UNIT-V</b> Environment Setu CRUD Operation and datatypes, Co	<ul> <li>and installation, Power of Types, Functions, Function as types Optional and Function overloading, Access modifiers, Getters and setters, Read-only &amp; statiling and Implementing Interface, Import and Export modules.</li> <li>Building Single Page App with Angular js</li> <li>e, One-way and Two-way data binding, AngularJS Expressions, AngularJS Corcontroller to a module, Component, Dependency Injection, Filters, Tables, An Select using ng-option, AngularJS AJAX.</li> <li>Connecting Angular js with MongoDB</li> <li>up of Mongodb, data modeling, The current SQL/NoSQL landscape, Create collers in MongoDB. ## **B. TECH THIRD YEAR (ELECTIVE-IV)**

Course code	ACSAI0620	LTP	Credits
Course title	AUGMENTED REALITY AND VIRTUAL	3 0 0	3
	REALITY		

**Course objective:** The objective of this course is to understand the basics of AR and VR. It will focus on understanding Unreal Engine. The course will cover the top platform for game development and the creation of cutting-edge real-time 3D environments. It will explore the understanding of essential tools driving important fields like VR/AR, training, and architectural visualization.

Pre-requisites: None

## **Course Contents / Syllabus**

## UNIT-I INTRODUCTION TO VIRTUAL REALITY & AUGMENTED REALITY

8 Hours

Introduction to Virtual Reality & Augmented Reality. Difference between VR and AR, History of VR.

Learn the basics - The differences between VR&AVR. Why are these technologies so popular now?, key players in this space, Popular VR & AR Devices? How do we create VR/AR experiences, Benefits of VR-AR, Challenges in VR, AR, and Careers related to VR, AR.

Platforms and Paradigms: VR-AR Developer Platforms -Demystifying the jargons- FOV- Degrees of freedom VR, Sensors required for VR devices, Evolution of VR-AR, Learn about the Multidisciplinary stream that combines various techniques to create VR-AR experiences, World of 360° videos.

## UNIT-II VR-AR TECHNOLOGY COMPONENTS, APPLICATIONS

8 Hours

Principles of AR/VR - Immersion, Teleportation, Interaction, Sensors, Haptics, 360-degree view, Motion & Orientation, Accelerometer, Gyroscope, Magnetometer, Depth sensing, Azure Kinect; Challenges – Realistic sense, Nausea, Depth, Non interfering sensors, Ergonomics.

Introduction to Headsets and SW tools required to create VR-AR applications. Basic steps required to create VR-AR experience.

AR, VR Applications, Platforms, Devices – HMD, Smart Glasses, Smart Phone based systems; Intro to Vuforia ; Examples - Gaming, Manufacturing, Oil & Gas, E-Commerce, Entertainment, Facebook, Snapchat, Instagram filters and much more, Education, Training (VMT, Disti), Medical, Fundamental surgery, Military

UNIT-III	UNREAL BASICS, MESH TYPES, INPUTS AND COLLISIONS IN	8 Hours
	UNREAL ENGINE	

Installing Unreal Engine & Account Setup, Unreal Engine Overview and Resources, Editor Interface Overview, Templates & Creating Your First Project, View Modes & Navigation Basics.

**Mesh Types, Inputs, and Collisions in Unreal Engine:** Importing Meshes Collisions, Mesh Editor & Mesh Types, Greyboxing, Static Mesh vs. Skeletal Meshes and Other Mesh Import Types, Brief Blueprint Basics, View Modes, Snapping, and Hotkeys, Skydomes, Lights (Overview) & Rendering Quality, Rendering & Performance Basics.

UNIT-IVLighting and Materials in Unreal8 Hours	3
--	---

Lighting Overview: Science, Optimization & Measurement, Lighting Design & Terminology, Setting Up Your Scene to Light, Light Types, Use Cases: Static, Stationary & Moveable, Lights Baking Lighting & Lightmap Resolution, Real Time Lighting & Shadows, Lighting Effects: IES / Light Rays / Volumetrics. External: Sun & Sky Actor Location & Time of Day. The Road to Real-Time Raytracing.

**Materials in Unreal:** Materials Overview, Creating Your First Material, Shading Models, Masks Material Expressions Textures: Texture Map Types. Instances & Master Materials. Material: Parameters & Blueprints, Non-UV Based Material Tools External: Quixel, Substance Designer Workflows. Profiling & Baking Down.

UNIT-VPhysics, Rigid Simulation and Post-Process Volumes8 Hours

Physics Content Examples. Physics Bodies: Mass, Gravity. Physics Forces: Motors, Forces, Constraints. Physics Volumes Collisions & Complexity. Introduction to Skeletal Physics & Rag Dolls. PPVs Key Settings, Lens & Film Effects, Tone Mapping, LUTs, Materials for UI, Rendering & Stylization. Visual FX Use Cases & Visual Warping Example.

**Course outcome:** After completion of this course students will be able to:

CO 1	Analyze various requirements and capabilities of modern augmented and virtual reality systems.	K4
CO 2	Describe augmented and virtual reality applications to suit a wide variety of needs.	K2
CO 3	Describe the capabilities and limitations of the techniques that make virtual and augmented reality possible.	K2
CO4	Identify audit and logging needs in application development, Describe the background of augmented and virtual reality and apply counter measures.	K1
CO 5	Demonstrate and use emerging technologies and tools for Augmented and Virtual reality analysis to provide the best Application.	K3
