NOIDA INSTITUTE OF ENGG. & TECHNOLOGY, GREATER NOIDA, GAUTAM BUDDH NAGAR (AN AUTONOMOUS INSTITUTE)

Bachelor of Technology Mechanical Engineering

AICTE Guidelines in Model Curriculum:

A student will be eligible to get Under Graduate degree with Honours only, if he/she completes the additional MOOCs courses such as Coursera certifications, or any other online courses recommended by the Institute (Equivalent to 20 credits). During Complete B. Tech. Program Guidelines for credit calculations are as follows.

- 1. For 6 to 12 Hours =0.5 Credit
- 2. For 13 to18 =1 Credit
- 3. For 19 to 24 =1.5 Credit
- 4. For 25 to 30 =2 Credit
- 5. For 31 to 35 =2.5 Credit
- 6. For 36 to 41 =3 Credit
- 7. For 42 to 47 =3.5 Credit
- 8. For 48 and above =4 Credit

For registration to MOOCs Courses, the students shall follow Coursera registration details as per the assigned login and password by the Institute these courses may be cleared during the B. Tech degree program (as per the list provided). After successful completion of these MOOCs courses, the students shall provide their successful completion status/certificates to the Controller of Examination (COE) of the Institute through their coordinators/Mentors only.

The students shall be awarded Honours Degree as per following criterion.

- i. If he / she secures 7.50 as above CGPA.
- ii. Passed each subject of that degree program in the single attempt without any grace.
- iii. Successful completion of MOOCs based 20 credits.

Course Code	AME0501	L	r	Г	P	Credit
Course Title	HEAT AND MASS TRANSFER	3	1	0		4
Course objecti	ve:					
1	Learn the concept of heat transfer.				K1	
2	Learn about heat loss from a surface.				K4	
3	Learn about radiation and how to minimize the effect of ra	adiation.			K4	
4	Learn about the boiling, condensation and application of h	neat excha	angei	' in	K4	
	industry.				17.5	
5	Learn about mass diffusion and its application in heal	lth equip	men	ťs.	K5	
Pre-requisites:	Basic of Thermodynamics, Differentiation, Integration					
UNIT-I C	Course Contents / Syllabus onduction				1/	hound
Ű					1	0 hours

Types of heat exchangers; Fouling factors; Overall heat transfer coefficient; Logarithmic mean temperature difference (LMTD) method; Effectiveness-NTU method; Compact heat exchangers.

Condensation and Boiling: Introduction to condensation phenomena; types of condensation, Heat transfer relations for

laminar film condensation on vertical surfaces and on outside & inside of a horizontal tube; Dropwise condensation; Heat pipes; Boiling modes, pool boiling.

Introduction to Mass Transfer:

Introduction; Fick's law of diffusion; Steady state equimolar counter diffusion; Steady state diffusion though a stagnant gas film, diffusion in Hemodialysis

Course	outcome:	
CO 1	Identify different modes of heat transfer and apply the governing law to calculate rate of heat	K1
	transfer.	
CO 2	Solve the problems of Heat conduction and convection related to plane wall, composite cylinders,	K5
	spheres, Extended surfaces, and their application in different industry.	
CO 3	Model problem for convective heat transfer coefficient, Analyze boiling and condensation related	K5
005	problems and their application to industry.	
CO 4	Analysis of radiation heat transfer problems and understanding its effect on global warming and	K4
CO 4	gas emission.	11-
CO 5	Solve the problems of heat exchangers and analyze different design criteria of heat exchangers.	K4

Course Code	AME0502 L	Т	P	Credit
Course Title	THEORY OF MACHINES 3	1	0	4
Course objectiv			ů	
1	Study, analyze, identify and interpret various mechanisms and machin design linkage or mechanism with their inversions for industrial equip that meets desired specifications and requirements.			K ₁ , K ₂
2	Demonstrate and perform mechanism analysis by using both graphica analytically to find the position, velocity, acceleration and forces of n mechanisms used in modern machinery.			K ₃ , K ₄
3	3 Study and design basic cam, gear and gear train mechanism for desired a for power transmission.			
4	Study, identify and analyze the static and dynamic forces on the syste linkage mechanism such as engine and also analyze a machine or eng with flywheel.			K ₃ , K ₄
5	Study and identify the causes of an unbalance system due to rotating reciprocating masses used in various machinery and also study the rogovernor.		K ₄	
6	Study and demonstrate the gyroscopic effect and its effect on the stab aero-plane and ship.	oility o	of	K ₃
-	e of Engineering Graphics Course Contents / Syllabus		4.0	
UNIT-I Mechanism:	Mechanisms, Velocity and Acceleration		10	hours
their classification	chanisms and machines, kinematics and kinetics, kinematic link and its ty on, kinematic chain, constraint motion, degrees of freedom of plana on of four bar chain, single slider crank chain and double slider crank chai	ar mee		-
theorem, velocit Acceleration A	locity of point in mechanism, relative velocity and instantaneous centers in four bar and slider crank mechanism.			
Introduction, ve theorem, velocit Acceleration A Introduction, acc slider crank mec	locity of point in mechanism, relative velocity and instantaneous certies in four bar and slider crank mechanism. Analysis: celeration of a point on a link, Coriolis's component of acceleration, acceleration, crank and slotted lever mechanism.			four bar ar
Introduction, ver theorem, velocit Acceleration A Introduction, acc slider crank mec UNIT-II	elocity of point in mechanism, relative velocity and instantaneous certies in four bar and slider crank mechanism. Analysis: celeration of a point on a link, Coriolis's component of acceleration, acc hanism, crank and slotted lever mechanism. Cam, Follower and Gears			
Introduction, ver theorem, velocit Acceleration A Introduction, acc slider crank med UNIT-II Cam and Folle Introduction, cla	elocity of point in mechanism, relative velocity and instantaneous certies in four bar and slider crank mechanism. Analysis: celeration of a point on a link, Coriolis's component of acceleration, acc hanism, crank and slotted lever mechanism. Cam, Follower and Gears	celerat	ion in	four bar ar 8 hour

systems of gear teeth, length of path of contact and arc of contact, contact ratio, minimum number of teeth on gear and pinion to avoid interference, simple, compound, reverted and epicyclic gear trains.

UNIT-III Force Analysis and Flywheel 8 ho	urs
---	-----

Force Analysis:

Static force analysis of mechanisms, D'Alembert's principle, dynamic force analysis of planar mechanisms, engine force analysis, piston effort, crank effort and turning moment on crankshaft.

Flywheel:

Flywheels and its function, turning moment diagrams for single cylinder double acting steam engine, four stroke IC engine and multi-cylinder engines, fluctuation of energy and speed, energy stored by flywheel.

v			
UNIT-IV	Balancing and Gove	ernors	8 hours

Balancing:

Introduction, static balancing and dynamic balancing, balancing of rotating masses in same plane and different plane, graphical and analytical methods, balancing of reciprocating masses.

Governor:

Introduction, governor and its function, types of governors, centrifugal governors and inertia governors, dead weight and spring controlled centrifugal governors, sensitivity and stability of governor, isochronous governor, hunting of centrifugal governors, effort and power of governor.

UNIT-V	Gyroscope	8 hours
Cumagaana		

Gyroscope:

Gyroscopic couples, Gyroscopic stabilization of shaft bearing, aero plane and ships, stability of four wheel and twowheel vehicles moving on curved paths.

Dynamometers:

Dynamometers, types of dynamometers, prony brake and rope brake dynamometer, belt transmission, epicyclic and torsion dynamometer.

Course	e outcome: After completion of this course students will be able to	
CO 1	Design linkage or mechanism with their inversions for industrial equipment that meets desired specifications and requirements and Perform mechanism analysis to find the position, velocity, acceleration, and dynamics of multi-bar mechanisms.	K ₁ , K ₂
CO 2	Calculate the amount of power transmission through the gear drive and calculate their driving efficiencies.	K ₃ , K ₄
CO 3	Understand balancing of reciprocating and rotary masses through solving engineering problems.	K ₂ , K ₃
CO 4	Analyze static and dynamic force analysis of various mechanism and design of flywheel.	$K_{3,}K_{4}$
CO 5	Understand the gyroscopic forces and couple and its effect on the stability of aero-plane and ship.	K ₃

Solar energy

Solar energy an option, Environmental impact of solar power, physics of the sun, the solar constant, instruments for measuring solar radiation.

Solar Energy Collection: Flat plate and concentrating collectors, classification of concentrating collectors, orientation, and thermal analysis.

Solar Energy Storage and Applications: Different methods, Sensible, latent heat, and stratified storage, solar ponds. Solar Applications solar heating/cooling technique, solar distillation, and drying, photovoltaic energy conversion

Biomass energy

Principles of Bioconversion, Anaerobic/aerobic digestion, types of Bio-gas digesters, gas yield, combustion characteristics of bio-gas, utilization for cooking, I.C. Engine.

Other energy sources: Tidal Energy, Wave Energy, Ocean Thermal Energy Conversion (OTEC), Hydrogen Production and Storage, Fuel cell,

UNIT-V Basics of Power Plant Piping, Physical layout, and development 10 Hrs

Introduction to power plant piping and piping components, Basics of power station valve, Comparison of features of generic types of valves, Multidisciplinary activities, *Introduction to Industrial drawing:* Piping and instrumentation diagram, pipe stress analysis, Pipe supports,

Overview of Electrical Generator and its Auxiliary Systems

Basics of Generator and Types of Generators, Generator testing, Excitation, and synchronization, H_2 and CO_2 Gas system, Stator coil cooling water system

Overview of Electrical system for power plant

Electrical system-Introduction and plant Auxiliary distribution system, Main, Auxiliary, and Evacuation power system, Electrical power system studies, Electrical Power Evacuation System, Cable, Raceway, Earthing, and Lightning

Power Plant Measuring Instruments

Instruments: Introduction and selection criterion, Supervisory instruments and analyzers used in Power plant, Control valve construction and CV sizing, Control valve actuator types, Cavitation, and flashing

Power Plant Control System

Overview, Automated Control system, Control system configuration, Wireless Communication, Foundation Fieldbus and Profibus in power plant.

Course outcome: CO1 To understand the need, importance, and energy scenario in coal-based power plants. K1, K2 **CO 2** To understand the role of steam turbine power plant auxiliary systems and material handling K2, K3 and water balance diagram. **CO 3** To ascertain fundamental design parameters (including thermodynamic cycles) of gas-based K2, K4 power plants and nuclear power plants. To understand the need and process of extracting electrical energy from renewable energy **CO**4 K3, K4 sources. **CO 5** To understand, identify and design the power plant piping and components, an overview of K4, K5 electrical systems for power plant and power plan measuring and controlling systems. **Text books :** 1. Programming Techniques: Ladder Logic programming for different types of logic gates, Ladder diagram – Concept of Contacts and Coil, Latching/ Holding Circuit, Memory Bits, Timers, and Counter

Course outcome:

CO1	I Identify mechatronic system and have knowledge about the sensors and transducers used in manufacturing system.						
CO2	I	dentify different actuation systems and design basic system for manufacturing system.	K2,K3				
CO3	O3 Design and apply hydraulic, pneumatic and electrical system in manufacturing.						
CO4	CO4 Identify different types of controllers and ability to choose one according to the need.						
CO5	Ι	Design a mechatronic system for manufacturing.	К4

Course Code AME0514 L T P Cred Course Title Computer Aided Engineering 3 0 0 3 Course objective: Impart the fundamentals approach for generating line, circle by algorithm and understand the mathematics behind 2D & 3D geometric transformations. K1, K2, K3 Impart the fundamentals approach for generating line, circle by algorithm and understand the mathematics behind 2D & 3D geometric transformations. K2, K3 Develop the mathematics Persentation of parametric form of analytic planar tryces and synthetic space to create and manipulate the design using various K2, K3, K3, K9, K9, K1, K2, K3 Thomart the fundamentals of CAD tools to create and manipulate the design using various K2, K3, K3, K4, K3, UNRT-1 Inderstand the fundamental concepts of Finite Element method and different K2, K3, K3, K4, K3, K4, K4, K4, K4, K4, K4, K4, K4, K4, K4			Mechanical Engineering Third Year				
Course objective: Image: Control of the importance, benefits, applications and essential elements of the fundamentals approach for generating line, circle by algorithm and understand the mathematical representation of parametric form of analytic planar surves and synthetic space to create and manipulate the design using various the system of curves in the fundamental of CAD tools to create and manipulate the design of the fundamental occupts of Finite Element method and different to conceptualization, geometric modelling using surfaces and solids. K2, K3, K4 4 Impart the fundamental concepts of Finite Element method and different percentatizets: Students should have basic knowledge of computer, Engineering Drawing, manufacturing process. K2, K3, K4 VINTI-1 Introduction: 8 Hours Computer Graphics Input devices - Cursor control devices, Digitizers, Image scanner, Keyboard termi Speech oriented devices, Graphics Advarce: 1 2 Hours Computer Graphics Input devices - Cursor control devices, Digitizers, Image scanner, Keyboard termi Speech oriented devices, Graphics Software: 1 2 Hours Computer Graphics Software: 1 2 Hours Graphics: Software Configuration, Graphics Functions, Graphics standards, viewing transformation, stansformations, Sulpay, Direct V VINTI-I Computer Graphics Software: 1 2 Hours Graphics software, Software Configuration, Graphics Functions, Graphics standards, viewing transformation, windowing and clipping. 12 Hours UNIT-II Computer Graphics	Course C	ode	AME0514	L	Т	Р	Credit
1 Understand the importance, benefits, applications and essential elements of CAD such as graphics input, display and output devices. K1, K2, K3 2 Impart the fundamentals approach for generating line, circle by algorithm and understand the mathematicis behind 2D & 3D geometric transformations. K2, K3 3 curves and synthetic space to create and manipulate the design using various types of curves K2, K3. 4 Impart the fundamental concepts of Finite Element method and different conceptualization, geometric modelling using surfaces and solids. K2, K3. 5 Understand the fundamental concepts of Finite Element method and different approaches used to solve realistic problems in Mechanical Engimeering K2, K3. 7 Course Contents / Syllabus 8 Hours Computer in Engineering Design, Classical vs Computer Aided Design, Elements of CAD, Essential requirement CAD, CAD Tools, Concepts of integrated CAD/CAM, Necessity & Benefits, Engineering Applications. 8 Hours Computer in Engineering Design, Classical vs Computer Aided Design, Elements of CAD, Essential requirement Speech oriented devices, Graphics display devices – Cursor control devices, Digitizers, Image scanner, Keyboard termin Speech oriented devices, Graphics display devices – Carbode Ray Tube, Random & Raster scan display, Direct V Storage Tubes, Color CRT monitors, Solid state monitors – emissive displays and non-emissive displays, Grap output devices. Software Configuration, Graphics Functions, Graphics standards, viewing transformations windowing and clipping.	Course T	itle	Computer Aided Engineering	3	0	0	3
1 Understand the importance, benefits, applications and essential elements of CAD such as graphics input, display and output devices. K1, K2, K3 2 Impart the fundamentals approach for generating line, circle by algorithm and understand the mathematicis behind 2D & 3D geometric transformations. K2, K3 3 curves and synthetic space to create and manipulate the design using various k2, K3. K4 K2, K3. K4 4 Impart the fundamentals of CAD tools to create and manipulate the design using various k2, K3. K4 K2, K3. K4 5 Understand the fundamental concepts of Finite Element method and different k2, K3. K4 K2, K3. K4 6 Understand the fundamental concepts of Finite Element method and different K2, K3. K4 K2, K3. K4 7 Understand the fundamental concepts of Finite Element method and different K2, K3. K4 K3, K4. K5. K3. K4 8 Understand the fundamental concepts of Finite Element method and different K2, K3. S4 K3, K4. K5. K3. K4 Course Contents / Syllabus 8 Buours Course	Course o	bject	ive:				
2 Impart the fundamentals approach for generating line, circle by algorithm and understand the mathematical representation of parametric form of analytic planar curves and synthetic space to create and manipulate the design using various k ₂ , K ₃ to see our conceptualization, geometric modelling using surfaces and solids. K ₂ , K ₃ 4 Impart the fundamentals of CAD tools to create and manipulate the design using various k ₂ , K ₃ , K ₄ K ₂ , K ₃ , K ₄ 5 Understand the fundamental concepts of Finite Element method and different approaches used to solve realistic problems in Mechanical Engineering K ₂ , K ₃ , K ₄ Pre-requisites: Students should have basic knowledge of computer, Engineering Drawing, manufacturing process. 8 Hours Computer in Engineering Design, Classical vs Computer Aided Design, Elements of CAD, Essential requirement CAD, CAD Tools, Concepts of integrated CAD/CAM, Necessity & Benefits, Engineering Applications. 8 Hours Computer in Engineering Design, Classical vs Computer Aided Design, Elements of CAD, Essential requirement CAD, CAD Tools, Concepts of integrated CAD/CAM, Necessity & Benefits, Engineering Applications. 8 Hours Computer Graphics Sinput devices – Cursor control devices, Digitizers, Image scanner, Keyboard termin Speech oriented devices, Graphics software: 12 Hours UNIT-H Computer Graphics Software: 12 Hours Output primitives Introduction: 20 Generatic standards, viewing transformation, transformations – Translation, Graphics Functions, Gra		Und	erstand the importance, benefits, applications and essential elem	ents	of	K	I, K ₂ , K ₃
Develop the mathematical representation of parametric form of analytic planar curves and synthetic space to create and manipulate the design using various types of curves K2, K3, K4 4 Impart the fundamentals of CAD tools to create and manipulate the design approaches used to solve realistic problems in Mcchanical Engineering K2, K3, K4 5 Understand the fundamental concepts of Finite Element method and different approaches used to solve realistic problems in Mcchanical Engineering Drawing, manufacturing process. Course Contents / Syllabus UNT-1 Introduction: 8 Hours Course Contents of CAD, Essential requirement CAD, CAD Tools, Concepts of integrated CAD/CAM, Necessity & Benefits, Engineering Applications. Computer in Engineering Design, Classical vs Computer Aided Design, Elements of CAD, Essential requirement CAD, CAD Tools, Concepts of integrated CAD/CAM, Necessity & Benefits, Engineering Applications. Computer Graphics Hardware: Graphics Suftware: Output devices - Cathode Ray Tube, Random & Raster scan display, Birect V Storage Tubes, Color CRT monitors, Solid state monitors - emissive displays and non-emissive displays, Grap output devices - Hard copy printers and plotters. UNT-I Computer Graphics Software: 12 Hours Graphics Software Configuration, Graphics Functions, Graphics sta	2	Impa	art the fundamentals approach for generating line, circle by algorith	hm a	nd		K ₂ , K ₃
4 İmpart the fundamentals of CAD tools to create and manipulate the design conceptualization, geometric modelling using surfaces and solids. K2, K3, K4 5 Understand the fundamental concepts of Finite Element method and different approaches used to solve realistic problems in Mechanical Engineering K2, K3 Pre-requisites: Students should have basic knowledge of computer, Engineering Drawing, manufacturing process. 8 Hours Course Contents / Syllabus 8 Hours UNIT-1 Introduction: 8 Hours CAD, CAD Tools, Concepts of integrated CAD/CAM, Necessity & Benefits, Engineering Applications. 8 Hours Computer fraphics Hardware: Graphics Systems, Graphics Input devices – Cursor control devices, Digitizers, Image scanner, Keyboard termit Speech oriented devices, Graphics display devices – Cathode Ray Tube, Random & Raster scan display, Direct V Storage Tubes, Color CRT monitors, Solid state monitors – emissive displays and non-emissive displays, Grap output devices – Hard copy printers and plotters. 12 Hours Graphics Software, Software Configuration, Graphics Functions, Graphics standards, viewing transformation windowing and clipping. 12 Hours Output primitives: Line generation algorithm. – DDA and Bresenham's line drawing algorithm, Circle generating algorithm – Mid-F and Bresenham's algorithm. Seconresic ransformations, Multiple transformation. Curves representation, Properties of curve design, Interpolation vs Approximation, Parametric representation,	3	Deve curv	elop the mathematical representation of parametric form of analytic es and synthetic space to create and manipulate the design using	-			K ₂ , K ₃
S approaches used to solve realistic problems in Mechanical Engineering N2, N3 Pre-requisites: Students should have basic knowledge of computer, Engineering Drawing, manufacturing process. Course Contents / Syllabus UNIT-I Introduction: 8 Hours Computer in Engineering Design, Classical vs Computer Aided Design, Elements of CAD, Essential requiremen CAD, CAD Tools, Concepts of integrated CAD/CAM, Necessity & Benefits, Engineering Applications. Computer Graphics Hardware: Graphics Systems, Graphics Input devices – Cursor control devices, Digitizers, Image scanner, Keyboard termi Speech oriented devices, Graphics display devices – Cathode Ray Tube, Random & Raster scan display, Direct V Storage Tubes, Color CRT monitors, Solid state monitors – emissive displays and non-emissive displays, Grap output devices – Hard copy printers and plotters. 12 Hours Graphics Software Configuration, Graphics Functions, Graphics standards, viewing transformation windowing and clipping. 12 Hours Output primitives: Line generation algorithms – DDA and Bresenham's line drawing algorithm, Circle generating algorithm – Mid-f and Bresenham's algorithm. Seeffection matrix representation, representation, Scaling, Shearing, Rotation & Reflection matrix representation, transformations. 2D Geometric transformations – Translation, Scaling, Shearing, Rotation & Reflection matrix representation, transformation, transformation, superimation, superimation, superimation, superimation, superimation, superimation, supportis, Bezier curves – Spline curves and specifications, Herm	4	Impa	art the fundamentals of CAD tools to create and manipulate the	desi	gn	K	2, K _{3,} K ₄

 windowing and clipping. Output primitives: Line generation algorithms – DDA and Bresenham's line drawing algorithm, Circle generating algorithm – Mid-pand Bresenham's algorithm. Geometric Transformations: 2D Geometric transformations – Translation, Scaling, Shearing, Rotation & Reflection matrix representation, and scaling about arbitrary point, Reflection through arbitrary line, Composite transformation, transformations, Multiple transformation. UNIT-III Planar Curves: 8 Hours Curves representation, Properties of curve design, Interpolation vs Approximation, Parametric representation analytic curves, Parametric continuity conditions, Space Curves: Parametric representation of synthetic curves – Spline curves and specifications, Hermite curves – Blending function formulation and its properties. UNIT-IV 3D Graphics: 6 Hours Introduction, Wireframe modelling, Surface modelling, Polygon surfaces – Polygon meshes, Polygon equat Quadric and Super quadric surfaces, Blobby objects, Solid modelling – Solid entities, Boolean set operations, Syrepresentation – Translational, Rotational and Hybrid sweeps, Boundary representation – Topology, Geome Boundary models, Constructive solid geometry – Unbounded and Bounded primitives. Color models: Coloring in computer graphics, RGB, CMY, YIQ, HSV and HLS color models 							
Output primitives: Line generation algorithms – DDA and Bresenham's line drawing algorithm, Circle generating algorithm – Mid-prand Bresenham's algorithm. Geometric Transformations: 2D Geometric transformations: 2D Geometric transformations – Translation, Scaling, Shearing, Rotation & Reflection matrix representation, and scaling about arbitrary point, Reflection through arbitrary line, Composite transformation, transformations, Multiple transformation. UNIT-III Planar Curves: 8 Hours Curves representation, Properties of curve design, Interpolation vs Approximation, Parametric representation analytic curves, Parametric continuity conditions, 8 Hours Space Curves: Parametric representation of synthetic curves – Spline curves and specifications, Hermite curves – Blending function and its properties, Bezier curves – Blending function formulation and its properties, Bezier curves – Blending function formulation and its properties. UNIT-IV 3D Graphics: 6 Hours Introduction, Wireframe modelling, Surface modelling, Polygon surfaces – Polygon meshes, Polygon equation, Symptonic surfaces, Blobby objects, Solid modelling – Solid entities, Boolean set operations, Symptone duaty models, Constructive solid geometry – Unbounded and Bounded primitives. Color models: Coloring in computer graphics, RGB, CMY, YIQ, HSV and HLS color models	•			ards,	viewi	ng trar	sformations –
Line generation algorithms – DDA and Bresenham's line drawing algorithm, Circle generating algorithm – Mid-grand Bresenham's algorithm. Geometric Transformations: 2D Geometric transformations – Translation, Scaling, Shearing, Rotation & Reflection matrix representate Rotation and scaling about arbitrary point, Reflection through arbitrary line, Composite transformation, transformations, Multiple transformation. UNIT-III Planar Curves: 8 Hours Curves representation, Properties of curve design, Interpolation vs Approximation, Parametric representation analytic curves, Parametric continuity conditions, Space Curves: 9 Parametric continuity conditions, Bezier curves – Spline curves and specifications, Hermite curves – Blending function formulation and its properties, Bezier curves – Blending function formulation and its properties. 6 Hours Introduction, Wireframe modelling, Surface modelling, Polygon surfaces – Polygon meshes, Polygon equat Quadric and Super quadric surfaces, Blobby objects, Solid modelling – Solid entities, Boolean set operations, Sverepresentation – Translational, Rotational and Hybrid sweeps, Boundary representation – Topology, Geometric solid geometry – Unbounded and Bounded primitives. Color models: Color models		-					
and Bresenham's algorithm. Geometric Transformations: 2D Geometric transformations – Translation, Scaling, Shearing, Rotation & Reflection matrix representate Rotation and scaling about arbitrary point, Reflection through arbitrary line, Composite transformation, transformations, Multiple transformation. UNIT-III Planar Curves: 8 Hours Curves representation, Properties of curve design, Interpolation vs Approximation, Parametric representation analytic curves, Parametric continuity conditions, Space Curves: Parametric representation of synthetic curves – Spline curves and specifications, Hermite curves – Blending function formulation and its properties, Bezier curves – Blending function formulation and its properties, Bezier curves – Blending function formulation and its properties. UNIT-IV 3D Graphics: 6 Hours Introduction, Wireframe modelling, Surface modelling, Polygon surfaces – Polygon meshes, Polygon equat Quadric and Super quadric surfaces, Blobby objects, Solid modelling – Solid entities, Boolean set operations, Sw representation – Translational, Rotational and Hybrid sweeps, Boundary representation – Topology, Geome Boundary models, Constructive solid geometry – Unbounded and Bounded primitives. Color models: Coloring in computer graphics, RGB, CMY, YIQ, HSV and HLS color models						1 .1	
Geometric Transformations: 2D Geometric transformations – Translation, Scaling, Shearing, Rotation & Reflection matrix representation and scaling about arbitrary point, Reflection through arbitrary line, Composite transformation, transformations, Multiple transformation. UNIT-III Planar Curves: 8 Hours Curves representation, Properties of curve design, Interpolation vs Approximation, Parametric representation analytic curves, Parametric continuity conditions, 8 Hours Space Curves: Parametric continuity conditions, 8 Bioing function of synthetic curves – Spline curves and specifications, Hermite curves – Blending function formulation and its properties, Bezier curves – Blending function formulation and its properties. 6 Hours Introduction, Wireframe modelling, Surface modelling, Polygon surfaces – Polygon meshes, Polygon equat Quadric and Super quadric surfaces, Blobby objects, Solid modelling – Solid entities, Boolean set operations, Sw representation – Translational, Rotational and Hybrid sweeps, Boundary representation – Topology, Geometric Solid geometry – Unbounded and Bounded primitives. Color models: Color models Coloring in computer graphics, RGB, CMY, YIQ, HSV and HLS color models	•			genei	ating a	algorith	m – Mid-point
2D Geometric transformations – Translation, Scaling, Shearing, Rotation & Reflection matrix representation, Rotation and scaling about arbitrary point, Reflection through arbitrary line, Composite transformation, transformations, Multiple transformation. UNIT-V Finite Element Modelling: 8 Hours		-					
	UNIT-V	F	inite Element Modelling:				8 Hours

Introduction, Principles of Finite elements modelling, General procedure for finite element analysis, Local and global coordinates, node and elements, Mesh Generation and its requirements Stiffness matrix/displacement matrix, Formulation of global stiffness matrix, Weighted Residual methods, Variation Rayleigh Ritz method, Principle of minimum potential energy. Problem on spring system, bar & beam elements.

Commercially available FEM packages, Desirable features of FEM packages, An overview of FEM software's like ANSYS, ABAQUS, NISA etc.

Course outcome:

	Understand the knowledge of basic structure of CAD, Memory types, input/output devices,	K ₁ , K ₂ ,
CO1	display devices and its working principles.	$\mathbf{K}_1, \mathbf{K}_2, \mathbf{K}_3$
CO2	Develop about the knowledge of graphics software, graphics standards, configuration, and functions; skill of writing algorithm for generating 2D graphic elements; and apply the mathematics behind 2D & 3D individual and combined geometric transformations.	K ₂ , K ₃
CO3	The ability of mathematical representation of parametric form of analytic planar curves and synthetic space curves such as Hermite, Bezier and B-spline curves and knowledge of their properties.	K ₂ , K ₃
CO4	The ability the knowledge of polygonal, quadric and super quadric surfaces, blobby objects, color models, and different solid modelling techniques and the skill of developing 3D geometric models in CAD software.	K ₂ , K _{3,} K ₄
CO5	Apply the fundamental concepts and approaches to solve a realistic engineering problem and analyze the design using Finite Element Methods.	K ₂ , K ₃

		Mechanical Engineering Third Year	•			
Course Co	ode	AME0552	L	Т	Р	Credit
Course Ti	itle	THEORY OF MACHINES	0	0	2	1
Student will perform the experiments based on mechanism, governor, g				nd vibr	ation.	
Pre-requi	sites:	Studnets know the theory of mechanism , governor and	vibra	tions		
		Course Contents / Syllabus				
~ • • •						
Sr. No.		me of Experiment				
1		y of simple linkage models/mechanisms				
2		y of inversions of four bar linkage				
3		y of inversions of single/double slider crank mechanisms				
4	_	riment on critical speed of shaft				
5	•	riment on cam and follower motion				
6	-	riment on gyroscope				
7	•	riment on static/dynamic balancing				
8	-	riment on watt governor				
9	-	riment on porter governor				
10	-	riment on proell governor				
11	_	riment on hartnell governor				
12	_	riment on gear trains				
13	_	riment on longitudinal vibration				
14	Expe	riment on transverse vibration				
Lab Co	urse	Outcome:				
CO 1	Stude	nt will be able to understand the relative motion between the ele	ement	ofam	echan	isms and their
	invers	ion for the specified type of motion in a machine.				
CO 2	Stude	nt will be able to understand the fundamental principles of balan	ncing t	o balar	nce the	masses
	static	ally & dynamically of a rotating mass system and observe the effe	ect of i	unbala	nce in a	a rotating
	mass	system.				
CO 3	Stude	nt will be able to demonstrate the torque analysis and measure ϵ	epicyc	lic gear	ratio d	on any kind of
	on en	gine or machine shaft.				
CO 4	Stude	nt will be able to understand the working principle of a governor	and a	ble to	identify	y different
	types	of governors in actual practice for maintain the constant speed of	of engi	ne.		
CO 5	Stude	nt will be able to understand the fundamental principles of gyros	scope	and ob	serve t	he gyroscopic
	effect	of a rotating disc.				
CO 6	Stude	nt will be able to observe the effect of longitudinal, transverse and	l torsio	onal vi	oration	and determine
	the from	equency and time period of oscillation.

	Mechanical Engineering Th	nird Y	Year					
Course Code	AME0553	L	Т	Р	Credit			
Course Title	Applied Industrial IOT lab	0	0	2	1			
Course objective: S	Student will perform the study on sensor	and ir	nstrum	entation	, actuator systems			
and perform the exp	eriment on IOT based systems.							
Pre-requisites: Stuc	lents know about the sensors and actuation	on sys	tem a	nd IOT l	based systems.			
Course Contents / Syllabus								
S. No.	LIST OF EXPERIMENTS (Total Eight to be performed)							
1	Study of Sensing and Actuating	systen	ns used	l in Indus	trial IOT.			
	Study of Healthcare based sensors such	as:- E	CG - 1	Electroca	rdiogram ACC –			
2	Accelerometer, TEMP – Temperature,							
2	Study of Agriculture based sensors such							
3	Sensor, Soil Temperature, S							
	Study of Healthy Environment based se quality sensor, Fire sensor, Accelerometer							
4	sensor, The sensor, The celeronical sensor,	-	oscop	e sensor,	Gus sensors, Ergin			
5	Introduction to IoT, Arduino platform and	l perfo	rm nec	essary sc	oftware installation.			
	To interface motor using relay with Ard							
6	ON/C	OFF.						
7	To interface sensors to Arduin	o and	display	the sens	or data.			
2	To interface sensor with Arduino and wr				ON/OFF Solenoid			
8	valve when sensor				ON/OPEL:			
9	To interface sensor with Arduino and w Actuator when sens				ON/OFF Linear			
,	To interface Arduino to a Bluetooth Modu				ta to a smart phone			
10	using Bl				I I I I I I I I I I I I I I I I I I I			
11	Develop an IoT based Sr	nart w	ater fl	ow syster	m.			
12	Develop an IoT based smart lock system	n for N	Aotor o	cycle/Car	/Household door			
Cours	se outcomes: After completion of this cour	se stuc	lents w	vill be abl	le to			
CO 1	Become familiar with the concept of Sense	or syst	ems					
CO 2	Understand and implement fundamentals of	of IOT						
CO 3	Practically implement the concepts IOT p	rogran	nming					
CO 4	Learn and implement the concepts Industr	ial IO7	Γ

	B. TECH. THIRD YEAR					
Course Code	ANC0501	L	Τ	Р	Credits	
Course Title	CONSTITUTION OF INDIA, LAW AND	2	0	0	2	
	ENGINEERING					
Course objecti	ve:To acquaint the students with legacies of constitutional develop	ment	in In	dia a	nd help them	
to understand the	most diversified legal document of India and philosophy behind it.					
Pre-requisites:	Computer Organization and Architecture					
	Course Contents / Syllabus					
UNIT-I	INTRODUCTION AND BASIC INFORMATION ABO	UT	INDI	AN	8 Hours	
	CONSTITUTION					
Meaning of the o	constitution law and constitutionalism, Historical Background of	the	Cons	tituer	t Assembly,	
Government of In	dia Act of 1935 and Indian Independence Act of 1947, Enforcement	nt of	the Co	onstit	ution, Indian	
Constitution and i	ts Salient Features, The Preamble of the Constitution, Fundamental	Righ	ts, Fu	ndam	ental Duties,	
Directive Principl	es of State Policy, Parliamentary System, Federal System, Centre-	State	Relat	tions,	Amendment	
of the Constitution	onal Powers and Procedure, The historical perspectives of the co	onstit	utiona	al am	endments in	
India, Emergency	Provisions: National Emergency, President Rule, Financial E	Emerg	gency	, and	Local Self	
Government – Co	nstitutional Scheme in India.					
UNIT-II	UNION EXECUTIVE AND STATE EXECUTIVE				8 Hours	
Powers of Indian	Parliament Functions of Rajya Sabha, Functions of Lok Sabha, F	Power	rs and	l Fun	ctions of the	
President, Compa	rison of powers of Indian President with the United States, Pow	vers a	and F	unctio	ons of Vice-	
President, Powers	and Functions of the Prime Minister, Judiciary - The Independ	ence	of th	e Sup	oreme Court,	
Appointment of J	udges, Judicial Review, Public Interest Litigation, Judicial Activisi	n, Lo	okPal,	Lok	Ayukta, The	
Lokpal and Lok	ayuktas Act 2013, State Executives - Powers and Functions of	the	Gove	rnor,	Powers and	
Functions of the	Chief Minister, Functions of State Cabinet, Functions of State Le	gislat	ure, I	Funct	ions of High	
Court and Subord	inate Courts.					
UNIT-III	INTRODUCTION AND BASIC INFORMATION ABO	UT	LEG	AL	8 Hours	
	SYSTEM					
	n: Sources of Law and the Court Structure: Enacted law -Acts of					
-	on Law or Case law, Principles taken from decisions of judges co			-	-	
	n in India and Foreign Courtiers (District Court, District Consum					
-	Court). Arbitration: As an alternative to resolving disputes in the no			-		
in dispute can agree that this will instead be referred to arbitration. Contract law, Tort, Law at workplace.						
UNIT-IV	INTELLECTUAL PROPERTY LAWS AND REGULATION	ТО			8 Hours	
	INFORMATION				0 110 415	
Intellectual Prope	rty Laws: Introduction, Legal Aspects of Patents, Filing of Patent	t App	olicati	ons,	Rights from	
Patents, Infringen	nent of Patents, Copyright and its Ownership, Infringement of Cop	pyrig	ht, Ci	vil R	emedies for	
Infringement, Reg	gulation to Information, Introduction, Right to Information Act, 200	05, In	forma	ation	Technology	
Act, 2000, Elect	ronic Governance, Secure Electronic Records and Digital Sig	gnatu	res, I	Digita	l Signature	
Certificates, Cybe	r Regulations Appellate Tribunal, Offences, Limitations of the Infor	rmati	on Te	chnol	ogy Act.	
UNIT-V	BUSINESS ORGANIZATIONS AND E-GOVERNANCE				8 Hours	
Sole Traders, Pa	artnerships: Companies: The Company's Act: Introduction, F	orma	tion	of a	Company,	

Memorandum of Association, Articles of Association, Prospectus, Shares, Directors, General Meetings and Proceedings, Auditor, Winding up. E-Governance and role of engineers in E-Governance, Need for reformed engineering serving at the Union and State level, Role of I.T. professionals in Judiciary, Problem of Alienation and Secessionism in few states creating hurdles in Industrial development.

COURSE OUTCOMES: After completion of this course students will be able to

	1	
CO 1	Identify and explore the basic features and modalities about Indian constitution.	K1
CO 2	Differentiate and relate the functioning of Indian parliamentary system at the	K2
	center and state level.	
CO 3	Differentiate different aspects of Indian Legal System and its related bodies.	K4
CO 4	Discover and apply different laws and regulations related to engineering	K4
	practices.	
CO 5	Correlate role of engineers with different organizations and governance models	K4

Bevel gears

Terminology of bevel gears, Force analysis, Virtual number of teeth, Beam strength and wear strength of bevel gears, Effective load of gear tooth, Design of a bevel gear system.

Worm Gears

Types of worms, Terminology, Gear tooth proportions, Efficiency of worm gears, Heat dissipation in worm gearing, Strength and wear tooth load for worm gears, Design of worm gearing system.

UNIT-V	SLIDING & ROLLING CONTACT BEARING	10 hours

Sliding Contact Bearing

Types, Properties and materials, Hydrodynamic lubrication, Heat generation, Design of journal bearing, Thrust bearing-pivot and collar bearing

Rolling Contact Bearing

Types, Advantages and disadvantages, Designation of bearing, Bearing life, Selection of roller bearings, Dynamic equivalent load for roller contact bearing under constant and variable loading, Reliability of Bearing, Design of roller bearing.

8, 12		
Course outo	come: After completion of this course students will be able to	
CO1	Analyse stress in different components, theories of failure and material science to analyse, design and/or select commonly used machine components.	K1, K2
CO2	Analyse fluctuating stress in different components using different criterion.	K1, K2, K3
CO3	Design Spur and helical gear for different application.	K1, K2, K3, K4, K5
CO4	Design Bevel and Worm gear for different application.	K1, K2, K3,
CO5	Select the suitable bearing for given operating conditions.	K1, K2, K3,K4

Bachelor of Technology Third Year							
Course Code	AME0603	L	Τ	Р	CREDITS		
Course Title	INDUSTRIAL ENGINEERING	3	0	0	3		
Course objective: To make the students able							
1	To understand the Concept of Industrial engineering.				K ₂		
2	Understand the forecasting and scheduling techniques.				K ₃ , K ₄		
3	To understand the concept of inventory control and queuing	g the	ory		K ₃ , K ₄		
4	To apply the concept of work system design		-		K ₃ , k ₄		
5	Ability to solve the problem of LPP, Transportation.				K ₃ , K ₄		
Pre-requisites: Basic knowledge of production system							
Course Contents / Syllabus							
UNIT-I	Overview of Industrial Engineering				9 hours		
	dustrial Engineering: Types of production systems, conc	ent c	of pro	oduct			
measurement in manufacturing and service organizations, operations strategies, liability and process design.							
Facility location and layout : Factors affecting facility location; principle of plant layout design, types of							
plant layout; computer aided layout design techniques; assembly line balancing; materials handling							
principles, types of material handling systems, methods of process planning, steps in process selection,							
production equip	ment and tooling selection, group technology, and flexible n	nanuf	factu	ring.			
UNIT-II	Production Planning and Control				9 hours		
Production Planning and control: Forecasting techniques – causal and time series models, moving							
average, exponential smoothing, trend and seasonality; aggregate production planning; master							
production scheduling; materials requirement planning (MRP) and MRP-II; routing, scheduling and							
priority dispatching, concept of JIT manufacturing system							
Project Management: Project network analysis, CPM, PERT and Project crashing.							
UNIT-III	Engineering Economy and Inventory Con				10 hours		
Engineering economy and Inventory control : Methods of depreciation; break even analysis, techniques for							
evaluation of capital investments, financial statements, time cost tradeoff, resource leveling; Inventory							
functions, costs, classifications, deterministic inventory models, perpetual and periodic inventory control systems, ABC analysis, and VED analysis.							
Queuing Theory: Basis of Queuing theory, elements of queuing theory, Operating characteristics of a							
queuing system, Classification of Queuing models.							
UNIT-IV	Work System Design				9 hours		
	Design: Taylor's scientific management, Gilbreth's contribut	tions	wor	k stu			
micro motion study, principles of motion economy; work measurement –time study, work sampling, standard							
data, Predetermined motion time system (PMTS); ergonomics; job evaluation, merit rating, incentive							
schemes, and wage administration.							
Product Design and Development: Principles of product design, tolerance design; quality and cost							
Considerations; product life cycle; standardization, simplification, diversification, value engineering and							
analysis, and concurrent engineering.							
UNIT-V	Operational Analysis				9 hours		
Operational Analysis: Formulation of LPP, Graphical solution of LPP, Simplex Method, Sensitivity							
Analysis, degeneracy, and unbound solutions. Transportation and assignment models; Optimality test: the							
steppingstone method and MODI method, simulation.							

Course	outcome: After completion of this course students will be able to			
CO 1	1 Understand the concept of production system, productivity, facility and process planning in various industries			
CO 2	Apply the various forecasting and project management techniques	K3		
CO 3	utilization using queuing theory			
CO 4	Apply principles of work study and ergonomics for design of work systems	K3		
CO S	Formulate mathematical models for optimal solution of industrial problems using linear programming approach	K4

	B TECH THIRD YEAR		
Course Code	AME0602	L-T-P	Credi
Course title	REFRIGERATION AND AIR CONDITIONING	3-0-0	3
Course objectiv	e:		
1	To Learn the fundamental principles and different methods of	K ₁ , K ₂	
	refrigeration and its application in different aircraft refrigeration		
	systems.		
2	To study of different refrigerants with respect to properties, and	K ₃ , K ₄	
	familiarize the simple and compound vapour compression		
	refrigeration systems.		
3	To understand the vapour absorption refrigeration systems and	K ₂ , K ₃	
	some recent refrigeration systems and its operating principles.		
4	To Learn principles of psychrometric processes and load	K ₃ , K ₄	
	calculations criteria for comfort and different air conditioning		
	systems.		
5	To study about different refrigeration Equipments and its	K ₂ , K ₃	
	application in industry.		
Pre-requisites: '	Thermodynamics, Basic Fluid Mechanics, Heat and Mass Transfer		
	Course Contents / Syllabus		
UNIT-I	Basics of refrigeration and air refrigeration systems	8 h a	ours
Introduction: 1			
refrigeration, uni Air refrigeratio working and ana	Brief history and need of refrigeration and air conditioning, ma t of refrigeration, coefficient of performance, types and application of r n: Reversed Carnot cycle and its limitation, Bell-Coleman cycle, air lysis of Simple; Bootstrap; Reduced ambient and Regenerative air refri fferent aircraft refrigeration systems with Mach number.	refrigerati craft refri	on. geration

UNIT-V	Refrigeration Equipments and applications	8 hours
-	System Equipment: Compressors, Condensers, Expansion Devices	and Evaporators,
-	wledge of transmission and distribution of air through ducts and fans.	
	ood preservation, Transport refrigeration, Cold storage, Refrigerates Fi	reezers, Ice plant,
Water coolers, C	Comfort and Industrial air conditioning.	
Course outcom		
CO 1	Illustrate the basic concepts of refrigeration and air conditioning	K ₁ , K ₂
	systems and air refrigeration cycles	
CO 2	Analyze the simple vapour compression refrigeration systems,	K ₃ , K ₄
	multi stage vapour compression refrigeration systems and the	
	properties, applications and environmental issues of different	
	refrigerants used in refrigeration and air conditioning,	
CO 3	Familiarize about the various equipments employed in	K ₂ , K ₃
	refrigeration and air conditioning systems and grasp construction	
	and working of vapour absorption system.	
CO 4	Calculate the heating and cooling load requirements of a room and	K ₃ , K ₄
	design it for human and industrial comfort.	
CO 5	Apply scientific and engineering principles to analyze and design	K ₂ , K ₃
	of ducting and ventilation systems that relate to refrigeration and	
	air conditioning.

BTECH THIRD YEAR						
Course code	AME0611	L-	T-P	Credit		
Course title	Hybrid Vehicle Propulsion	3-	0-0	3		
Course objective:						
1.	Understand the basics of the hybrid electric vehicles a	and it's type	s.	K2		
2.	Understand the types of drive trains used in hybrid ve			K2		
3.	Understand the propulsion units used in Hybrid Vehicles and their efficiency.					
4.	Understand the requirements and devices of energy st vehicles.	orage used	in hybrid	K2		
5.	Understand the concept of downsizing of IC engineering vehicles.	ines in cas	e of hybrid	K2		
6.	Understand the principles of energy management and strategies.	d issues rela	ated to these	K2		
Pre-requisites:						
Interest in hybrid V	ehicles					
	Course Contents / Syllabus					
UNIT-I	Introduction to Hybrid Electric Vehicles		8 hou	rs		
and electric vehi Conventional V Basics of vehicl	History of hybrid and electric vehicles, social and encles, impact of modern drive-trains on energy supplies. Tehicles: e performance, vehicle power source characterization odels to describe vehicle performance.		-			
UNIT-II	Hybrid & Electric Drive-trains		10 hou	irs		
Hybrid Electri	c Drive-trains: Basic concept of hybrid traction,	introducti	on to variou	s hybrid		
drive-train topol	ogies, power flow control in hybrid drive-train topolog	ies, fuel eff	iciency analys	sis.		
Electric Drive-t	rains:					
-	f electric traction, introduction to various electric da	rive-train to	opologies, po	wer flow		
	c drive-train topologies, fuel efficiency analysis.					
UNIT-III	Electric Propulsion unit		12 hou			
-	sion unit: Introduction to electric components used	•				
-	nd control of DC Motor drives, Configuration and co					
-	nd control of Permanent Magnet Motor drives, Con	figuration a	and control o	f Switch		
	or drives, drive system efficiency					
UNIT-IV	Energy Storage			12 hours		
. .	: Introduction to Energy Storage Requirements in Hyb			•		
•••	brage and its analysis, Fuel Cell based energy storage		• •	-		
•••	brage and its analysis, Flywheel based energy storage	and its ana	lysis, Hybridi	zation of		
different energy	C		.			
-	e system: Matching the electric machine and the ir		-			
• • •	Sizing the propulsion motor, sizing the power electronics, selecting the energy storage technolog					
	s, supporting subsystems			10 hours		
UNIT-V	Energy Management Strategies			TO HOULS		

Introduction to energy management strategies used in hybrid and electric vehicles, classification of different energy management strategies, comparison of different energy management strategies, implementation issues of energy management strategies.

Course Outco	me: After completion of this course students will be able to	
CO1	Understand the fundamentals of Rapid Prototyping Technologies for Engineering Applications	K1, K2
CO2	Understand the methodology to Manufacture the Products using SLA, SGC, PolyJet and CLIP Technologies and study their Applications , Advantages and Case Studies & Materials	K3, K4
CO3	Understand the methodology to Manufacture the Products using LOM, Ultrasonic Consolidation and FDM Technologies and study their applications, advantages and case studies & Materials	К3
CO4	Understand the methodology to Manufacture the Products using SLS, Binder Jetting and InkJet Fusion Technologies and study their Applications, Advantages and Case Studies & Materials	К3
CO5	Understand the Advancements, Scopes, Design Aspects & Associated Applications & Techniques	K4, K5
Text Books:		
1. Sanjay k	Kumar, "Additive Manufacturing Processes", Springer 2020.	
2. Ian Gibson	n, Davin Rosen, Brent Stucker "Rapid Prototyping Technologies, Springer, 2nd Ed, 20	014

		B TECH THIRD YEAR		
Cours	e Code	AME0614	LTP	Credits
Course TitlePRODUCT LIFECYCLE MANAGEMENT3-0-03				
Course	e Objecti	ves:		
1	managen	rate systematic approaches of innovative product lifec nent using design thinking with an awareness of busi ations needed to produce products.	-	K1, K2, K3
2	process d	op ability to employ state-of-the-art technology in product levelopment and be PLM proficient.		K ₂ , K ₃
3		lop skills to support product realization, including protot validation and marketing.	type,	K ₂ , K ₃
4	To introc	luce the latest trends and technology in digital manufacturi	ring.	K ₂ , K ₃ , K ₄
5		iarize with the concepts of PLM strategy and application.		K ₂ , K ₃
Pre-requis				
Students sh	ould have	basic knowledge product design & development and manu	ufacturing	5.
Course Contents / Syllabus

Risk Introduction: Risk Introduction, Risk Analysis, Risk Response Strategy and Implementation, Introduction to Project Monitoring and Controlling, Analysis Techniques, Visualization Techniques, Elements of Control, Monitor and Control Schedule, Cost and Resources, MS Project:

come: After completion of this course students will be able to	
Understand the concept of Product Life Cycle Management.\ & Work flow	K ₁ , K ₂ , K ₃
Know on the product realization, including prototype, testing, validation and marketing.	K ₂ , K ₃
Identify and prioritize risks and Implement risk response	K ₂ , K ₃
Understand the cost of quality, importance of managing environment, health, and safety in projects	K ₂ , K ₃
Describe the project monitoring process and Explain the supply chain strategies	K ₂ , K ₃
	Understand the concept of Product Life Cycle Management.\ & Work flow Know on the product realization, including prototype, testing, validation and marketing. Identify and prioritize risks and Implement risk response Understand the cost of quality, importance of managing environment, health, and safety in projects Describe the project monitoring process and Explain the supply chain

SELF-STUDY

Students shall be assigned with topics related to the latest technological developments in field of product life cycle management

TEXT BOOKS:

1. Product Lifecycle Management: Grieves, Michael, McGraw-Hill Publications, Edition 2013, ISBN:978-0071452304.

2. Product Lifecycle Management Volume I : Stark, John, Springer, 3rd Edition, 2016, ISBN: 978-3319174396.

3. Product Lifecycle Management Volume II : Stark, John, Springer, 3rd Edition, 2016, ISBN: 978-3319244341

REFERENCE BOOKS:

1. Fabio Guidice, Guido La Rosa, Product Design for the environment -A lifecycle approach, Taylor and Francis 2013, ISBN:978-1420001044

2. Robert J.Thomas, "NDP: "Managing and forecasting for strategic processes", Wiley Publications, 2013 ISBN:978-0471572268

3. Stark, John, "Product Life cycle Management: Paradigm for 21st Century Product

4. Realization", Springer-Verlag, 2015. ISBN:978-3-319-17440-2

5. PDM : Product Data Management : Burden, Rodger, Resource Pub, 2013. ISBN: 978-0970035226

6. PDM : Product Data Management : Burden, Rodger, Resource Pub, 2013. ISBN: 978-0970035226

SUGGESTED SOFTWARE PACKAGES: Windchill & associated PTC packages (PLM)

Course	Code	AME0651	LTP	Credit	
Course Title		Machine Design Lab	0-0-2	1	
	Suggested list of Experiment				
Sr. No.	No. Name of Experiment				
1.	Review	of drawing & editing command in PTC Creo / A	utoCAD.		
2.	Draw 2	D model of 4 bar mechanism.			
3.	Draw 3	D model of single slider crank mechanism.			
4.	Design	& Analysis of shaft subjected to bending.			
5.	Design	& Analysis of shaft subjected to twisting.			
6.	Design	& Analysis of shaft subjected to combined loadir	ng.		
7.	Design	& Analysis of stress concentration in one of the r	nachine eleme	nts.	
8.	Design	& Analysis of closed coil helical spring.			
9.	Design	& Analysis of gear.			
10.	Design a	& Analysis of bearing.			
Lab Co	urse Ou	atcome: After completion of this course stude	ents will be ab	le to	
CO	1	Draw the design problem into design software i	n the form of 2	2D or 3D model.	
CO	2	Apply the governing equations and formulate the boundary conditions.			
CO	3	Evaluate the various aspects related to the design of machine elements viz.			
	technical, economic, social & environmental viability.				
CO	4	Design the machine elements ensuring its qualit	y & functional	lity satisfactorily.	

Course Co	de	AME0654	LTP	Credit

	Sugge	ested list of Experiment -(At least 8 exp	eriments of the	following)			
Course Ob	Course Objective: This course will enable students to						
1. Make use of Data sets in implementing the machine learning algorithms							
2. Imp	plement the machine learning concepts and algorithms in any suitable language of choice.						
Sr. No.		Name of Experiment					
1		a program to perform various types of reg		_			
2	-	given set of training data examples stored		-			
	demonstrate the Candidate-Elimination algorithm to output a description of the set of all						
		eses consistent with the training example					
3		a program to demonstrate the working of					
		appropriate data set for building the dec	ision tree and app	bly this knowledge to			
	-	y a new sample					
4		a program to implement the naïve Bayesi					
		as a .CSV file. Compute the accuracy, pr					
5		a program to construct a Bayesian networ	U				
		to demonstrate the diagnosis of heart pat	U	ard Heart Disease Data			
		ou can use Java/Python ML library classe		TT 1 1			
6		EM algorithm to cluster a set of data stor					
		stering using k-Means algorithm. Compa		-			
		ent on the quality of clustering. You can a	add Java/Python I	ML horary classes/AP1			
7	-	program	hon algonithm to	aloggify the inig data got			
/		a program to implement k-Nearest Neigh	e	•			
	this pro	oth correct and wrong predictions. Java/H	ymon ML norar	y classes call be used for			
8	-	nent the non-parametric Locally Weighte	d Pagrassion alg	orithm in order to fit			
0	-	bints. Select appropriate data set for your					
9		an Artificial Neural Network by impleme					
,		e same using appropriate data sets.	nung the Dackpro	opagation argorithm and			
10		a program to implement an AI chatbot					
10		a program to perform the TIK TAK TOE	program				
12		a program to perform Breadth first search					
13		a program to perform Water Jug Problem					
14		a Program to perform simple Calculator					
		me: After completion of this course stude	ents will be able t	0			
CO1		stand the implementation procedures for					
CO2		y and apply machine learning algorithms					
CO3		searching problems using various algorit		-			
CO4		y problems that are amenable to solution					
		e suited to solving a given problem.	j interest

B. TECH. THIRD YEAR			
Course Code	ANC0601	L T P	Credits
Course Title	CONSTITUTION OF INDIA, LAW AND	2 0 0	2
	ENGINEERING		
Course objecti	ve: To acquaint the students with legacies of constitutional develop	ment in India	and help them
•	most diversified legal document of India and philosophy behind it.		and help them
Pre-requisites:	Computer Organization and Architecture		
	Course Contents / Syllabus		
UNIT-I	INTRODUCTION AND BASIC INFORMATION ABO	UT INDIAN	8 Hours
	CONSTITUTION		
Meaning of the	constitution law and constitutionalism, Historical Background of	the Constitue	ent Assembly,
Government of In	dia Act of 1935 and Indian Independence Act of 1947, Enforcement	nt of the Const	itution, Indian
Constitution and i	ts Salient Features, The Preamble of the Constitution, Fundamental	Rights, Fundar	nental Duties,
Directive Principl	es of State Policy, Parliamentary System, Federal System, Centre-	State Relations	, Amendment
of the Constitution	nal Powers and Procedure, The historical perspectives of the constitu	utional amendr	nents in India,
Emergency Provis	sions: National Emergency, President Rule, Financial Emergency, a	nd Local Self	Government –
Constitutional Sch	ieme in India.		
UNIT-II	UNION EXECUTIVE AND STATE EXECUTIVE		8 Hours
	Parliament Functions of Rajya Sabha, Functions of Lok Sabha, F	Powers and Fu	
	rison of powers of Indian President with the United States, Pow		
-	and Functions of the Prime Minister, Judiciary – The Independent		
	udges, Judicial Review, Public Interest Litigation, Judicial Activisr		-
	ayuktas Act 2013, State Executives – Powers and Functions of		•
-	Chief Minister, Functions of State Cabinet, Functions of State Le		
Court and Subord		8	
UNIT-III	INTRODUCTION AND BASIC INFORMATION ABO	UT LEGAL	8 Hours
	SYSTEM		0 110015
The Legal System	n: Sources of Law and the Court Structure: Enacted law -Acts of	Parliament ar	e of primary
legislation, Common Law or Case law, Principles taken from decisions of judges constitute binding legal rules.			
The Court System in India and Foreign Courtiers (District Court, District Consumer Forum, Tribunals, High			
Courts, Supreme Court). Arbitration: As an alternative to resolving disputes in the normal courts, parties who are			
in dispute can agre	ee that this will instead be referred to arbitration. Contract law, Tort,	Law at workpl	ace.
UNIT-IV	INTELLECTUAL PROPERTY LAWS AND REGULATION	ГО	8 Hours
	INFORMATION	- 0	0 Hours
Intellectual Property Laws: Introduction, Legal Aspects of Patents, Filing of Patent Applications, Rights from			
Patents, Infringement of Patents, Copyright and its Ownership, Infringement of Copyright, Civil Remedies for			
Infringement, Regulation to Information, Introduction, Right to Information Act, 2005, Information Technology			
Act, 2000, Electronic Governance, Secure Electronic Records and Digital Signatures, Digital Signature			
Certificates, Cyber Regulations Appellate Tribunal, Offences, Limitations of the Information Technology Act.			
	regulations repender ritounal, oriences, Emitations of the information		1069 I 10 1.
UNIT-V	BUSINESS ORGANIZATIONS AND E-GOVERNANCE		8 Hours
01111-1	BOBALDO ONOMINIZATIONO AND E-OUVENNANCE		0 110015

Sole Traders, Partnerships: Companies: The Company's Act: Introduction, Formation of a Company, Memorandum of Association, Articles of Association, Prospectus, Shares, Directors, General Meetings and Proceedings, Auditor, Winding up. E-Governance and role of engineers in E-Governance, Need for reformed engineering serving at the Union and State level, Role of I.T. professionals in Judiciary, Problem of Alienation and Secessionism in few states creating hurdles in Industrial development.

COURSE OUTC	COMES: After completion of this course students will be able to	
CO 1	1 Identify and explore the basic features and modalities about Indian constitution.	
CO 2	Differentiate and relate the functioning of Indian parliamentary system at the	K2
	center and state level.	
CO 3	Differentiate different aspects of Indian Legal System and its related bodies.	K4
CO 4	Discover and apply different laws and regulations related to engineering practices.	K4
CO 5	Correlate role of engineers with different organizations and governance models	К4
