		M.TECH FIRST YI	EAR	
Course	Code	AMTCSE0101	LTP	Credits
Course	Title	Advanced Data Structures and Algorithms	3 0 0	3
Course	objecti	ve:	-	
1 '	To prov	vide an overview of data structures and algorithms		
2 7	To anal	yze the concept of data structures through ADT including List	t, Stack, Qu	ieues.
3 '	To be fa	amiliar with advanced data structures such as height balanced	trees, hash	tables, priority queues.
4 ′	To unde	erstand concepts about searching, sorting and hashing techniq	ues.	
5 '	To anal	yze problems and writing program solutions to problems by id	dentifying t	he appropriate data structure.
Course	Conter	nts / Syllabus

Planning with state space search, conditional planning, continuous planning, Multi-Agent planning, Forms of learning, inductive learning, Reinforcement Learning, learning decision trees, Neural Net learning and Genetic learning. Probabilistic Methods, Bayesian Theory, Dempster Shafer Theory, Bayes Network,

Evolutionary Algorithms: swarm intelligence, ant colony optimization.

Course outcomes: After completion of this course students will be able to

CO 1	Understand the fundamental of the artificial intelligence	K2
	(AI) and its foundations.	
CO 2	Apply principles and techniques of AI in problem solving.	К3
CO 3	Analyze the various tools for application of AI.	K4
CO 4	Apply the concepts of knowledge-based system used in AI.	K3
CO 5	Understand the various Evolutionary Algorithm in AI.	K2

Course Code	AMTCSE0112	L T P	Credits			
Course Title	Advanced Operating Systems	3 0 0	3			
Course object						
1	To learn the fundamentals of advanced operating System	ms.				
2	To understand what a process is and how processes are	synchroni	zed			
3	To understand different approaches to memory manage	ment				
4	Students should be able to use system calls for managin	ng process	es, memory and the file system.			
5	To understand the structure and organization of the file	system.				
Pre-requisites	:					
1	Basic knowledge of computer fundamentals.					
2	Basic knowledge of computer organization.					
3	Basic knowledge of Operating system					
	Course Contents / S	Syllabus				
UNIT-I	Introduction of Operating System	-	8 hours			
Introduction to O	perating Systems, Types of Operating Systems, Operatir	ng System	Structures. Operating System Services, System			
Calls, Virtual Ma	chines, Operating System Design and Implementation, T	ypes of ad	vanced operating systems (NOS, DOS,			
Multiprocessor C	OS, Mobile OS, RTOS, Cloud OS)					
UNIT-II	Inter Process Communication		8 hours			
	critical regions, Mutual Exclusion with busy waiting, sle	-	1 1 0			
passing; Scheduli	ing- scheduling in batch systems, Interactive systems, Re	al time sy	stems, Thread scheduling			
UNIT-III	Deadlocks and Distributed Operating Systems		8 hours			
	duction, Deadlock Detection and Recovery - Deadlock					
resource of each	resource of each type, recovery from deadlock; Deadlock Avoidance, Deadlock Prevention.					
UNIT-IV	Memory and Device Management		8 hours			
	vapping, Paging, Virtual memory – Demand paging, J					
	File System, File Permissions, MS DOS and UNIX fi	ile system	case studies, NTFS; Device Management- I/O			
Channels, Interrupts and Interrupt Handling, Types of device allocation						
UNIT-V	Distributed Operating Systems		8 hours			
1	ating system concept - Architectures of Distributed Sys					
detection, Agree	ment protocols, Threads, processor Allocation, Allocat	ion algori	thms,Distributed File system design; Real Time			

Operating System	s: Introduction to Real Time Operating Systems, Concepts of s	cheduling, Real time Mem	ory Management		
	studies:Linux kernel-X86 architectures,	Advance	topics	for	
research:Virtualiz	cation,cgroups,namespaces,RBAC,containers,RDMA,Rackscale	e computing			
Course outcour					
	ne: After completion of this course students will be able to	1/2			
CO 1	Understand the structure, functions and type of OS.	K2			
CO 2	Implement the requirement for process synchronization and coordination handled by operating system	K2			
CO 3	Understand deadlock concepts and implement prevention and avoidance algorithms	K2,K3			
CO 4	Describe and analyze the memory management and its allocation policies and understand File systems	K2, K4			
CO 5	Understand the concept of distributed and real time OS.	K2

	M. TECH FIRST YEAR		
Course Code	AMTCY0112	LTP	Credits
Course Title	Fundamentals of Data Science and Applications	300	3
Course objective	:		
1	Develop practical data analysis skills, which can be applied to prac	tical proble	ms.
2	Develop fundamental knowledge of concepts underlying data scier	nce projects.	
3	Develop practical skills needed in modern analytics.		
4	Explain how math and information sciences can contribute to build	ling better a	lgorithms and software
5	Develop applied experience with data science software, programm	ing, applica	tions and processes.
Pre-requisites: B	asic knowledge of statistics, linear algebra.		
	Course Contents / Syllabus		
UNIT-I	INTRODUCTION TO DATA : Data Stores - Introduction to Stru DBMS Concepts, RDBMS (Oracle/MySQL), NoSQL Concep Cassandra, Basic to complex Querying in SQL. (Lab Element), Qu	ots, Mongo	, ,
UNIT-II	DATA ANALYSIS TECHNIQUES / STAGES: Intro Unstructured Data, Taming Unstructured Data. Understandi Understanding data formats (XML, JSON, YAML, PMML), Data Atom, RDF), Preparing Data - Data Analysis/Profiling, Data Clear	ng Data feeds (RSS	-
UNIT-III	DATA WAREHOUSING AND LEARNING ALGORITHMSOLAP - Fundamentals of Data Warehousing, Dimension ModellChanging Dimensions, ETL Process, Performance Tuning ofLoads, Data Analytics Fundamentals, Pre Processors, Post ProcessSupervised Learning - Linear/Logistic Regression, Decision Tree, TBayesUnsupervised Learning, K-Means, Association Rules, Himplementation of the basic algorithms.	ling. Slowly warehouse ors	8

UNIT-IV	HADOOP THEORY: Introduction to Hadoop, Map-Reduce. Hadoop Theory and hands on implementation, MR coding, Basic Management and Monitoring of Hadoop Cluster, Implementation of K-meansalgorithm using MR.	8
UNIT-V	DATA ANALYTICS: Introduction to Streaming Data Analytics, Introduction to Spark, Introduction to Storm, Introduction to Scala.Case study of Walmart Sales Forecasting Data Set, Boston Housing Data Set.	8
Course outcome: A	After completion of this course students will be able to	K2
	Discuss basic notions and definitions in data analysis, machine learning.	
CO 2	Explain standard methods of data analysis and information retrieval	K1,K2
CO 3	Analyse the problem of knowledge extraction as combinations of data filtration, analysis and exploration methods.	K4
CO 4	Solve a real-world problem using mathematical equations.	К3
CO 5	Evaluate to develop complex analytical reasoning.	K5

M. TECH FIRST YEAR			
Course Code	AMTAI0114	LTP	Credits
Course Title	Information Retrieval	3 0 0	3
	to teach basic concepts, tools & techniques in the lementation aspects, representation, organization, in		ation Retrieval (IR) & Search. It focuses on theoretical ation as well as current trends and research issues in the
Pre-requisites	:		
• Basic und	erstanding of Linear Algebra and Probability.		
• Basic und	erstanding of any programming language.		
	Course Co	ntents / Syllabu	IS
UNIT-I	Introduction	v	8 hours
processing: Text processing mode	format, Tokenization, stemming, lemmatization	n, Language mod	e: Text processing, Indexes and query matching; Text eling, Examples of open-source IR Systems, Query Spark Jones weighting formula, Two-Poisson model),
UNIT-II	Language models		8 hours
Unigram, Bigram language models, generating queries from documents, Language models and smoothing, ranking with language models, KullbackLeibler divergence, Divergence from randomness, Passage retrieval and ranking. Management of Information Retrieval Systems: Knowledge management, Information management, Digital asset management, Network management, Search engine optimization, Records compliance and risk management, Version control, Data and data quality, Information system failure.			
UNIT-III	Information retrieval systems		8 hours
systems, Decision			systems and expert locators, Knowledge management nverted indices, Index components and Index life cycle,
UNIT-IV	Query processing for ranked retrieval and Com	pression	8 hours
	1 1		oosting lists, Compressing the dictionary; Information Similarity-based classifiers, Multi category ranking and

classification, learning to rank, Introduction to the clustering problem, Partitioning methods, Clustering versus classification, Reduced dimensionality/spectral methods.

UNIT-VSentiment Analysis8 hoursIntroduction to sentiment analysis, Document-level sentiment analysis. Sentence-level sentiment analysis, Aspect-based sentiment analysis;
Comparative sentiment analysis, baseline algorithm, Lexicons, Corpora, Introduction to different Tools of Sentiment analysis and
Applications.

Course outcomes: After completion of this course students will be able to

CO1	Describe the different information retrieval modelsand compare their	K2, K4
	weaknesses and strengths.	
CO2	Apply mathematical models and algorithms of statistical Natural Language	К3
	Processing (NLP).	
CO3	Understand the standard methods for Web indexing and retrieval	K2
CO4	Compare different search engine ranking techniques.	K4
CO5	Demonstrate indexing, compression, information categorization and	K3
	sentiment analysis.

Course Co		I FIRST YEAR	Credit
Course Co			2
Course Tit	le Machine Learning Lab	0 0 4	2
	Suggested I	ist of Experiments	
Sr. No.	Name of Experiment		СО
1.	Write a program to perform various types of regres	ssion	CO1
2.	Demonstrate the working of the decision tree based appropriate data set for building the decision tree a to classify a new sample.		CO1, CO2, CO3
3.	Build an Artificial Neural Network by implementin algorithm and test the same using appropriate data		CO2
4.	Implement naïve Bayesian Classifier model. Write the accuracy, precision, and recall for your data set		C01,C02
5.	Apply EM algorithm to cluster a set of data. Use the clustering using k-Means algorithm. Compare the algorithms and comment on the quality of clustering the set of the clustering of the set of the s	results of these two	CO1, CO2
6.	Implement k-Nearest Neighbor algorithm to classif both correct and wrong predictions.	fy the iris data set. Print	CO4
7.	Implement Support Vector Machine using Scikit-le	earn	CO5
8.	Implement the non-parametric Locally Weighted R order to fit data points. Select appropriate data set draw graphs.		CO5
Lab Cours	se Outcomes: After completion of this course stud	lents will be able to–	
CO 1 U	Jnderstand the implementation of ML Tool.		K2
	Design python programs for various learning algorithm		К6
	Apply appropriate data sets to the machine learning alg		К3
CO 4 I	dentify and apply machine learning algorithms to solve	e real world problems.	K3

	M. TECH FIRST YEAR		
Course Code	AMTAI0211	LTP	Credit
Course Title	Computer Vision	300	3
Course objectives:			
The course covers the b	pasic understanding of key features of Computer Vision and apply the Comp	outer Vision concepts to	o Biometrics, Medical
diagnosis, document pre-	ocessing, mining of visual content, surveillance and advanced rendering.		
Pre-requisites: To e	extract the maximum from the course, the following prerequisites are must.		
-			
-	g knowledge of Linear Algebra, Probability Theory.		
• Analysis	s, some notions of Signal Processing, and Numerical Optimization Course Contents / Syllabus		
UNIT-I	Introduction to Computer Vision		8 hours
	introduction to computer vision		
Quantizous and State of	f the ent. The Four De of Computer Vision, Coometry of Image Forme	ation Digital Imaga I	
	f-the-art, The Four Rs of Computer Vision, Geometry of Image Formation Affine A	, , ,	Formation and low-level

Building blocks, Detectors and Descriptors, SIFT & Single Object Recognition, Optical Flow & Tracking, Introduction to Object Recognition and Bag-of-Words Models, Constellation model, Recognition: Objects, Scenes, Activities, Object classification and detection: a part-based discriminative model (Latent SVM), Objects in Scenes. Representation and Description, Object Recognition, 3-D vision and Geometry, Digital Watermarking. Texture Analysis.

UNIT-V	Application of Light at Surfaces	8 hours				
PhongModel, Reflectance M	PhongModel, Reflectance Map, Albedo estimation, Photometric Stereo; Use of Surface Smoothness Constraint; Shape from Texture, color,					
motion and edges, Face Deter	motion and edges, Face Detection, Deep Learning, Image Segmentation, Feature Tracking & Motion Layers.					
Case Study: Computer Vision	based Mouse, Computer Vision based Text Scanner, Computer Vision based Smart Selfi	e, Surveillance Robot, Sixth				
Sense Robot						

Course outcomes: After completion of this course students will be able to

CO 1	Understand the deep architectures used for solving various Vision and Pattern	K1
	Association tasks.	
CO 2	Analyze the appropriate learning rules for each of the architectures of perceptron	K4
	and learn about different factors of back propagation.	
CO 3	Apply training algorithm for pattern association with the help of memory network.	К3
CO 4	Inclose the models of deep looming with the help of was seen	V 2
CO 4	Implement the models of deep learning with the help of use cases.	K3
CO 5	Understand different theories of deep learning using neural networks.	K2

M.TECH FIRST YEAR						
Course Code	Course Code AMTCSE0211 L T P Credit					
Course Title	Software Project & Management	3 0 0	3			
Course object	tive:		·			
1	To understand the fundamentals of Software Project Manag	gement				
2	To define & explore various scheduling terminologies and	techniques	8.			
3	To identify the necessity of testing and assurance activities	as well as	explore various testing tools.			
4	To introduce concept of software reviews, inspections and	other softw	ware monitoring and control techniques			
5	To learn about different software management tools					
Pre-requisites:						
	Course Contents / Syll	abus				
UNIT-I	Introduction and Software Project Planning		8 hours			
Fundamentals of	Software Project Management (SPM), Need Identification	on, Vision	and ScopeDocument, Project Management			
Cycle, SPM Obj	ectives, Management Spectrum, SPM Framework, Software	e Project l	Planning, Planning Objectives, Project Plan,			
Types of Projec	t Plan, Structure of a Software Project Management Plan	n, Softwar	re Project Estimation, Estimation Methods,			
Estimation Mode	els, Decision Process					
UNIT-II	Project Organization and Scheduling Project Elements		8 hours			
	n Structure (WBS), Types of WBS, Functions, Activities a					
	ze Personnel, Project Schedule, Scheduling Objectives, Bu	0	j <u> </u>			
	Network Diagrams: PERT, CPM, Bar Charts: Milestone Ch	arts, Gant				
UNIT-III	Project Monitoring and Control		8 hours			
	roject Monitoring & Control, Earned Value Analysis, Earne		0			
	Variance (CV), Schedule Variance (SV), Cost Performan					
-	Earned Value Indicators, Error Tracking, Software Re	eviews, T	ypes of Review: Inspections, Deskchecks,			
	ode Reviews, Pair Programming		01			
UNIT-IV	Software Quality Assurance and Testing Objectives	<i>і</i> : т	8 hours			
0 1	es, Test Plans, Test Cases, Types of Testing, Levels of Te	0				
	Validation, Testing Automation & Testing Tools, Concept Matrice and Indicators. The SEL Conchility Maturity Mag					
	Metrics and Indicators, The SEI Capability Maturity Modules, Statistical Quality Assurance, Cleanroom Process.		, SQA Acuvilles, Formal SQA Approaches:			
UNIT-V	Project Management and Project Management Tools	Software	8 hours			
	Configuration Management	Soliware	0 110015			
	Comiguration Management					

Software Configuration Items and Tasks, Baselines, Plan for Change, Change Control, Change Requests Management, Version Control, Risk Management: Risks and Risk Types, Risk Breakdown Structure (RBS), Risk Management Process: Risk Identification, Risk Analysis, Risk Planning, Risk Monitoring, Cost Benefit Analysis, Project Closeout, Software Project Management Tools: CASE Tools, MS-Project, Jira software, Trello and other Planning and Scheduling Tools

Course outcome: After completion of this course students will be able to

CO 1	Describe the basic terminology of Software Project Management.	K ₁ , K ₂					
CO 2	Explore project lifecycle & scheduling techniques to implement project elements successfully.	K ₃ , K4					
CO 3	Review the dimensions of project monitoring and controlling through different types of reviews.	K2					
CO4	Implement testing objectives, test plan and implement various types of testing, ensuring good software quality	К3					
CO 4	Defend various tools to facilitate software project management process	K4, K5

1	To Create your own VR or AR idea in Unity			
2	To Design for different VR and AR platforms			
3	To learn Manage production of VR and AR pro	ojects		
4	To effectively design applications around the b	enefits of VR and AI	2	
5	To establish to Connect with a powerful network	rk in the VR and AR	industry	
Pre-requisites: Basic Knowledge o	f Software Engineering			
	Course Contents	/ Syllabus		
UNIT-I	Developing VR Mechanics (Part 1)		8 hours	
	and applying scripts to 3D game objects. Creating ng physics and 3D objects, 3D and 2D user interfa			
UNIT-II	Developing VR Mechanics		9 hours	
Applying grab and	release mechanics. Enhancing physics-based inter-	actions and throw me	echanics. Building interactable	
	ing on VR interactions with the application of del		6	
UNIT-III	3D Interactions and Physics	-	9 hours	
Creating an AR app occlusion.	using Vuforia. Introduction to AR Foundation's c	core features, includin	ng spacial mapping, plane tracking and	
UNIT-IV	Designing VR Experiences		6 hours	
Virtual controls lik trainings and health	e buttons, levers, dials, sliders. Interacting & man care	ipulating objects usir	ng raycasting.AR VR for Medical	
UNIT-V	Optimizing and Publishing Your App		8 hours	

Introduction to Unity Collaborate. Optimizing your VR or AR experience. Publishing your project to the App Store.Case Study of vuforia AR/VR Projects.

Course outcome: After completion of this course students will be able to

CO 1	Create your own VR or AR idea in Unity	K ₁ ,K2, K6
CO 2	Design for different VR and AR platforms	K_1, K_2, K_6
CO 3	Implement production of VR and AR projects	K3
CO 4	Apply applications around the benefits of VR and AR	K3
CO 5	Demonstrate to a powerful network in the VR and AR industry	K ₃

Course Title	INTRODUCTION TO BLOCKCHAIN	300	3
Course objecti	ive:		
improve business	this course is to provide conceptual understanding o processes. The course covers the technological under intation of solutions using block Chain technology.		
Pre-requisites:	Cryptography Techniques, Data Structures and Algo	orithms, In	troduction to Programming
	Course Contents /		
UNIT-I I	ntroduction to Blockchain		8 HOURS
• 1	nitives: Cryptographic Hash Function, Properties of a Digital Signature, Public Key Cryptography, A basic		· •
UNIT-II I	Basic crypto primitives		8 HOURS
	Puzzle friendly Hash, Collison resistant hash, digit nowledge systems.	al signatu	res, public key cryptography, verifiable random
UNIT-III I	Distributed Consensus, Consensus in Bitcoi	n	8 HOURS
,	f of Work (PoW), Proof of Stake (PoS), PoW v cs, Consensus), Permissioned Blockchain (RAFT C Bitcoin scripts.		
UNIT-IV I	Blockchain Architectures		8 HOURS
	ybrid, Blockchain for Enterprise – Overview, Blockc	hain Com	
UNIT-V S			

Turing completeness of Smart Contract Languages and verification challenges, using smart contracts to enforce legal contracts, comparing Bitcoin scripting vs. Ethereum Smart Contracts.

CO 1	List fundamentals of block chain and explain cryptographic	K1
	concepts underlying block chain technology in layman terminology.	
CO 2	Describe how cryptography applies to block chain and impacts implementation-related decisions.	К2
CO 3	Apply block chain technology, how it relates to the myriad of associated technologies and concepts (communication, consensus, architecture, identity, among others).	K3
CO 4	Create a minimalist block chain application.	K6
CO 5	Illustrate Smart Contract Languages and comparison of Smart Contracts with Bitcoin scripting.	K4

Course Title	Digital Image Processing	300	3			
Course objectiv	ve:					
1	To introduce the student to image processing fundamental	s and cor	relation and	d convolution technique.		
2	To describe the image enhancement techniques.					
3	To describe various Image transformation technique.					
4	To describe the morphological image processing and segr	nentation	n Techniqu	es.		
5	To describe Image compression Technique.					
	Linear algebra, Matrices, Matrix Operations, Determination stics and probability, Programming experience, preferably i	n Matlab		Linear Equations, Eigen values,		
	Course Contents / Sylla					
UNIT-I	Introduction: Fundamental steps of image processing, components of an image processing of system, the image model and image acquisition, sampling and quantization, Image file formats Relationship between pixels, distance functions, scanner, Image Analysis, Intensity transformations, contrast stretching, Correlation and convolution8					
UNIT-II	Statistical and spatial operations: Grey level transform equalization, histogram specification, smoothing & s filters, frequency domain filters, homomorphic filtering, restoration. Inverse and weiner filtering. FIR weiner filte image transforms, smoothing splines and interpolation.	sharpenir image fi	ng-spatial Itering &	8		
UNIT-III	Image Transforms - Fourier, DFT, DCT, DST, Karhunen -Loeve, Singular value decomposition, Walsh, Representation and Description - Chain codes, Polygon Signatures Boundary Segments, Skeltons, Boundary Des Descriptors, Relational Descriptors, PCA.	Hadama al approx	rd, Slant. ximation,	8		
UNIT-IV	Morphological and other area operations: basi operations, opening and closing operations, dilation ero transform, morphological algorithms, extension to gr	sion, Hit	or Miss	8		

	Segmentation and Edge detection region operations, basic edge detection, second order detection, crack edge detection, gradient operators, compass	
	and Laplace operators, edge linking and boundary detection, thresholding, Otsu's method, region-based segmentation, segmentation by morphological watersheds. Use of motion in segmentation	
UNIT-V	Image compression: Types and requirements, statistical compression, spatial compression, contour coding, quantizing compression, image data compression-predictive technique, pixel coding, transfer coding theory, lossy and lossless predictive type coding. Basics of color image processing, pseudo color image processing, color transformation, color smoothing and sharpening, color segmentation, color image compression, compression standards	8
		<u></u>
Course outco	me: After completion of this course students will be able to	
CO 1	Understand The fundamentals of images and its processing	K1,K2
CO 2	Apply the concepts of Image enhancement and image Restoration Algorithms/techniques	K2,K3
CO 3	Apply the various image transformation Algorithms/techniques	K2,K3
CO 4	Understand and apply morphological image processing and image Segmentation Algorithms/technique	K2,K3
CO 5	Understand the concepts of image (gray and color) compression technique	K2

Course Ti	tle Intrusion Detection System	300	3			
Course of	jectives:					
1	Familiarize students about the com	mon threats faced in era of inter	ernet and the necessity of intrusion detection systems for			
	securing the systems.					
2	To recognize the essential concepts of	f intrusions and intrusion detection	on.			
3		ntrusion detection systems and	l understand principles and techniques used in intrusion			
	detection.					
4	To gain knowledge about the research					
5			detection and implement intrusion detection systems.			
Pre-requi	sites: Fundamental knowledge Cyber	security, Networks and Operatin	ng Systems.			
		Course Contents / Sylla	abus			
UNIT-I						
UNIT-II	HOST-BASED INTRUSION DE Exploits – Denial of Service (DoS) a to Host. NETWORK-BASED INTRUSION and Attacks – ARP Attacks, IP Att Attacks, DNS Attacks.	and DDoS, Gaining Unauthorized	ed Access erabilities			
UNIT-III	DATABASEANDAPPLDETECTION:Limitations ofRequirements of Application-Spect	Existing Intrusion Detection				

UNIT-IV	ANOMALY DETECTION: Principles of Anomaly Detection, Advantages & Limitations of Anomaly Detection, Anomaly Detection Techniques, Anomaly Detection Systems and Algorithms-Network Behavior Based Anomaly Detectors (rate based)-Host-based Anomaly Detectors-Software Vulnerabilities Payload Anomaly Detection	8 hours
UNIT-V	CASE STUDY: Case Study of Research in Host-Based Intrusion Detection	8 hours
	Systems, Case Study of Research in Network-Based Intrusion Detection Systems, Case Study of Research in Application-Specific and Database IDS, Case Study in Research in Anomaly Detection Systems.Data mining tools -a case study for network intrusion	
Course ou	Itcome: After completion of this course students will be able to	
	•	
CO 1	Understand the comprehensive knowledge on the subject intrusion detection systems in order to improve their security posture.	K2
CO 2	Analyse different intrusion detection alerts and logs to distinguish types of attack from false alarms	K4
CO 3	Discuss the principles and techniques used in intrusion detection.	K2
CO 4	Understand the way of applying Intrusion Detection tools and techniques, as well as the challenges and limitations of intrusion detection systems	K2
CO 5	Discuss various case studies on research outlook in intrusion detection systems.	K2
